PMT with "my preferences" and "all preferences" tabs (not to be implemented for review)
>"My preferences" view will show only the preferences that are contained in a given preference set
>"All preferences" will open full preferences view (all common terms) to allow user to add prefs to a given set
>both views could have a search pane

Set list can be collapsed and explanded by selecting sets button in footer
Active set is shown at botom of main panel ("Base Set")

PMT view showing sets panel in expanded state.
Highlighted set has preferences contained in that set revealed in panel on the right

add new set by selecting "+" sign in left panel (hover state shown)

New set appears in list with "not applied to any devices"
>new set is populated with base set prefs until user adjusts/adds/removes preferences
> set name is directly editable

vvNew set begins with no conditions (will not be applied anywhere until user adds conditions)
>(default to "apply to all devices" for review?)
Set name is editable in conditions view also

PMT general view
Selecting a set (select set name / box) brings up the 'my preferences' of that set. Edit option appears once selected.
Indication (dark blue line and diamond beside adjuster) show which preferences have been modified from the 'Base set'

Conditions can be edited and removed

Conditions can be edited and removed

hover state (see details)

Editing Time context
>individual number fields are text-editable or adjusted using arrow keys
>Mouse-clicking outside of edit field, tabbing out of edit field, or selecting enter will enter edited values
>escape to cancel entry

selected

Time condition is edited

adding a device

adding a device - select device type from list (not implementing for review)

Selecting "edit" in sets panel takes user to conditions/share/sync/history tabbed view
'Conditions' tab allows user to manually adjust the contexts a set gets applied in
Conditions are editable in all sets except the 'Base Set'
- the 'Base Set' is applied on all devices, at all times, unless overridden by a conditional set

When a set is first created, it has no contexts (including no devices)
Note: for review we may want to default to "applies to all devices", since user will not be able to add any devices

When adding a time condition, the current time is shown by default (within 5 minute increments and with a 2-hour time range)
rindividual numerical fields are text editable as well as controllable with arrow keys

selected/edit state

The set will not be applied until a device is added

Adding "all" devices (not implementing for review)

"Applies to all devices" is added - set will be applied to all devices at specified time

Time condition is removed (set will not be applied to any device until another time condition is added)

21:30 *to* **06:30**

hover

21:30 *to* **06:30**

select or focus

22:30 *to* **06:30**

select values or
select Enter
(editable state)

22:30 *to* **06:30**

selecting delete icon
will remove condition

21:30 *to* **06:30**
