

PMT with “my preferences” and “all preferences” tabs (not to be implemented for review)
>“My preferences” view will show only the preferences that are contained in a given preference set
>“All preferences” will open full preferences view (all common terms) to allow user to add prefs to a given set
>both views could have a search pane

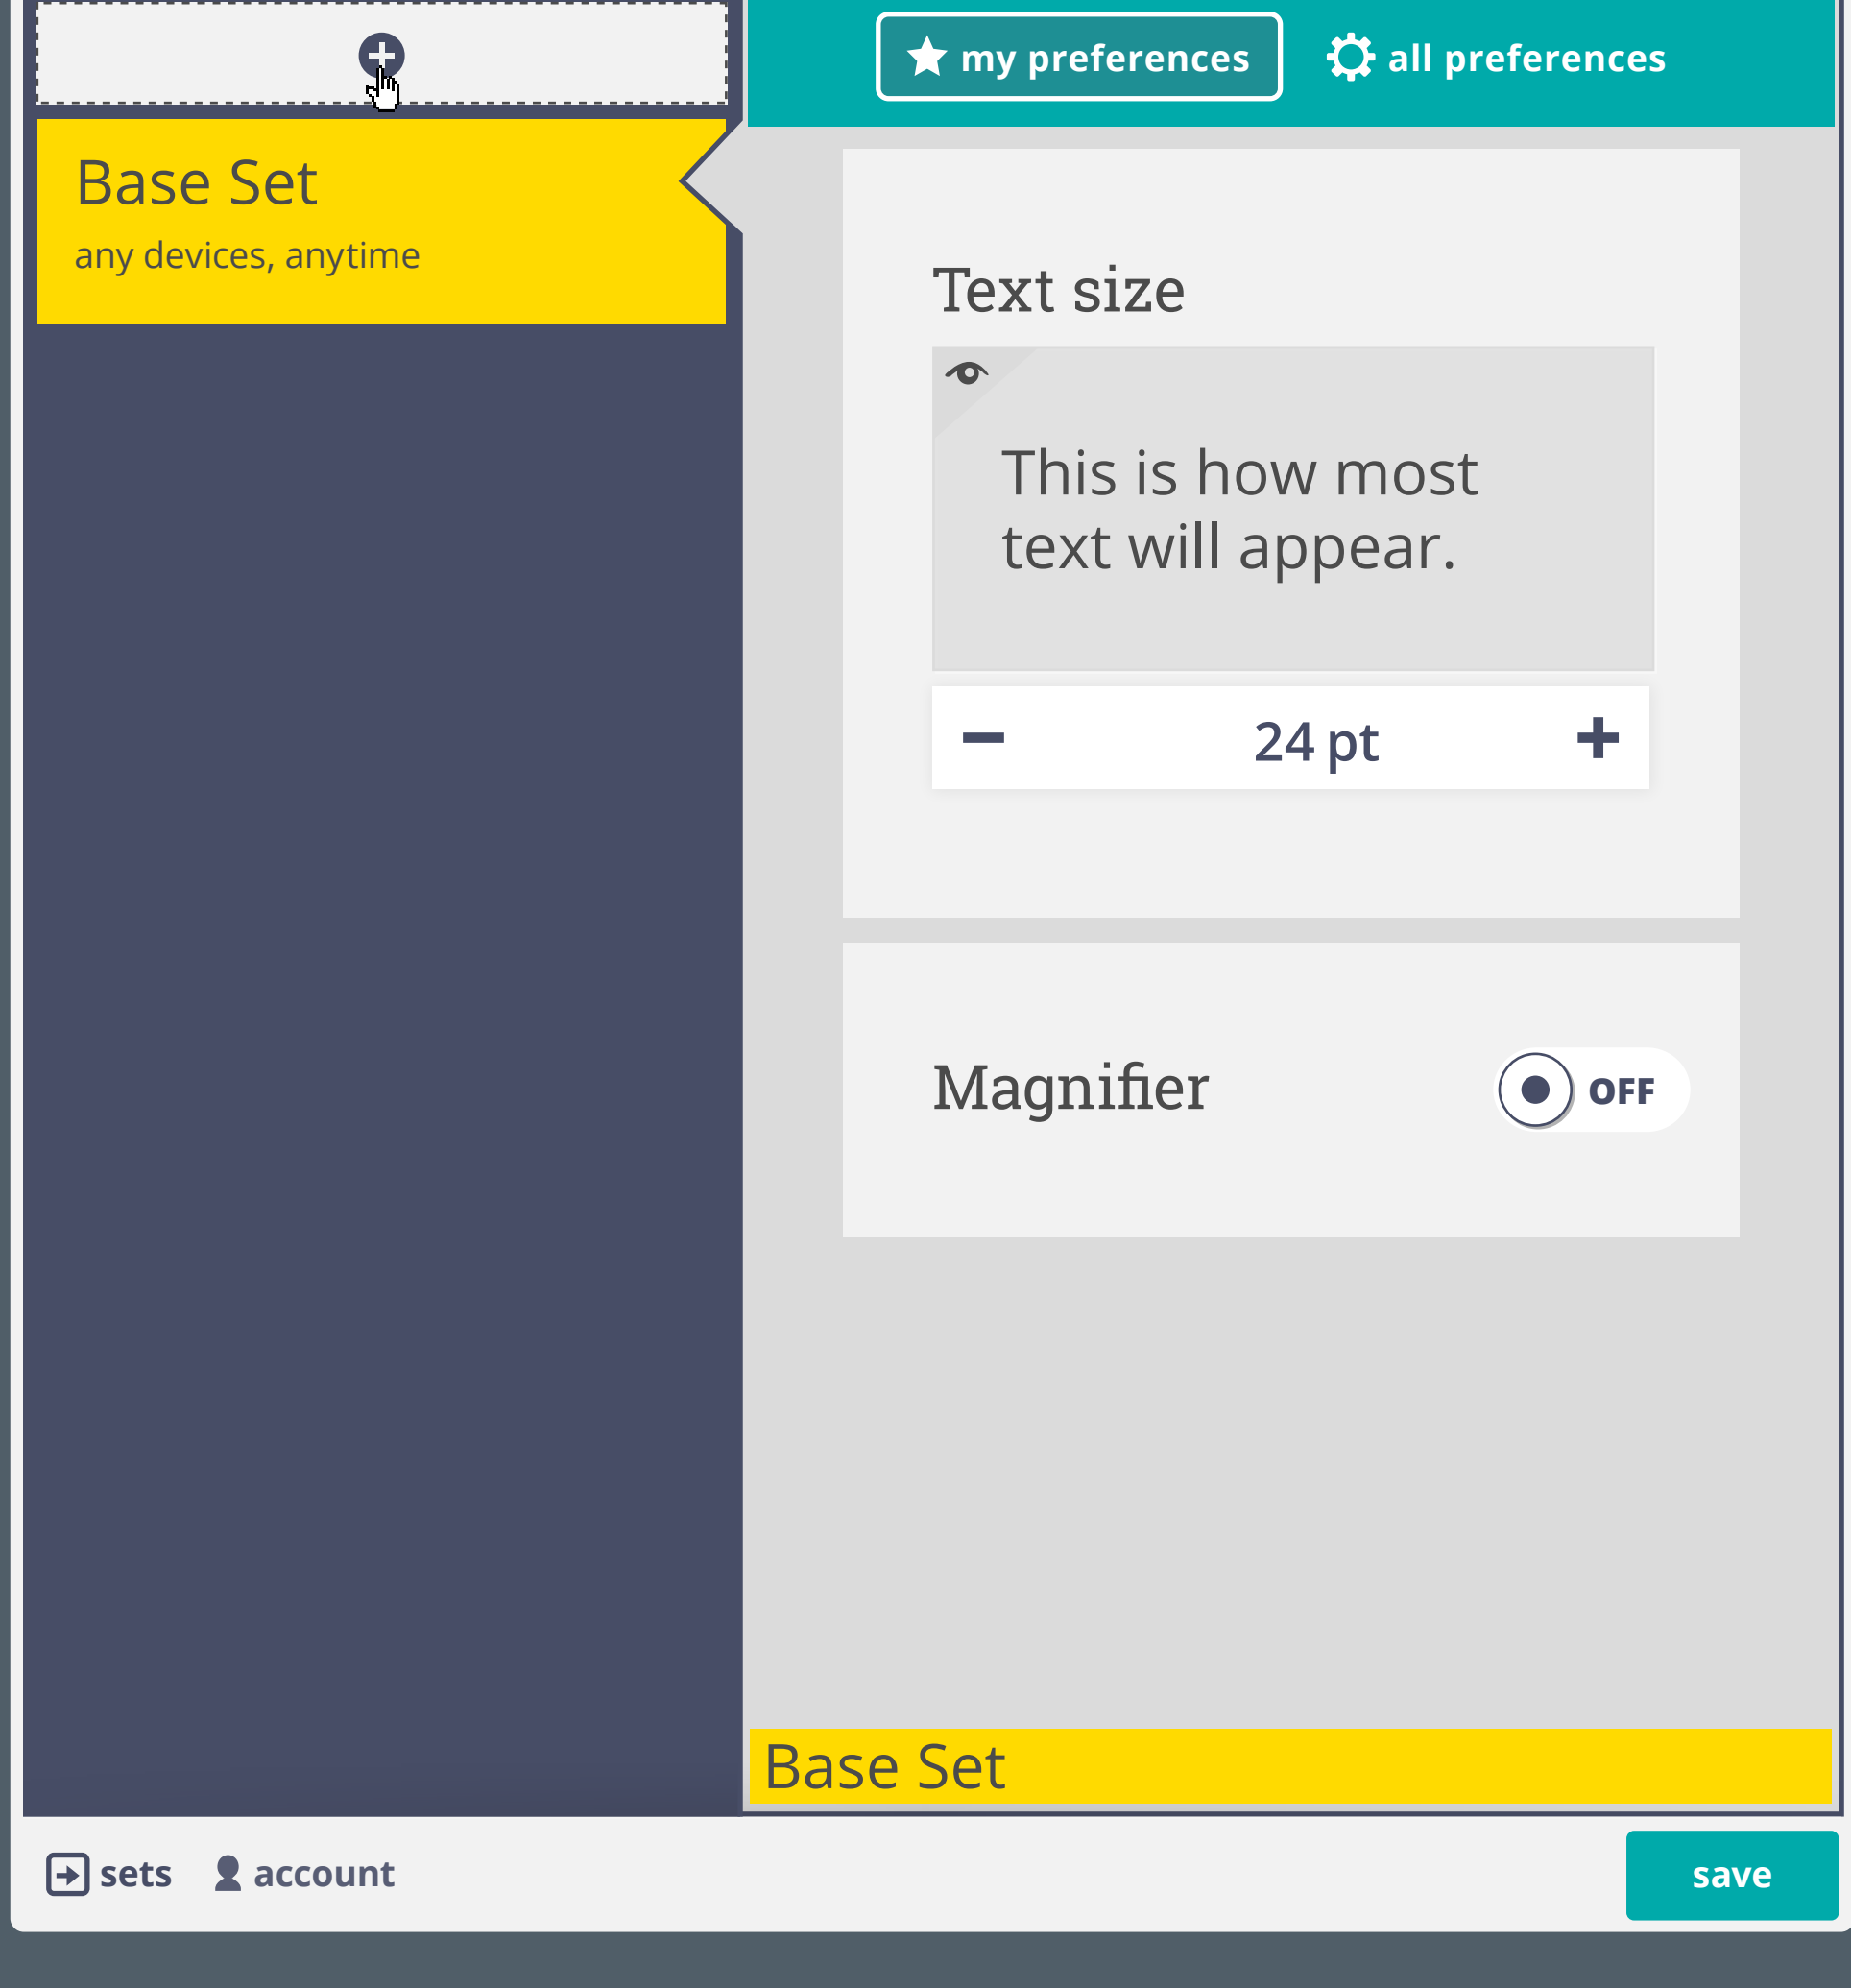

Set list can be collapsed and expanded by selecting sets button in footer
Active set is shown at botom of main panel (“Base Set”)

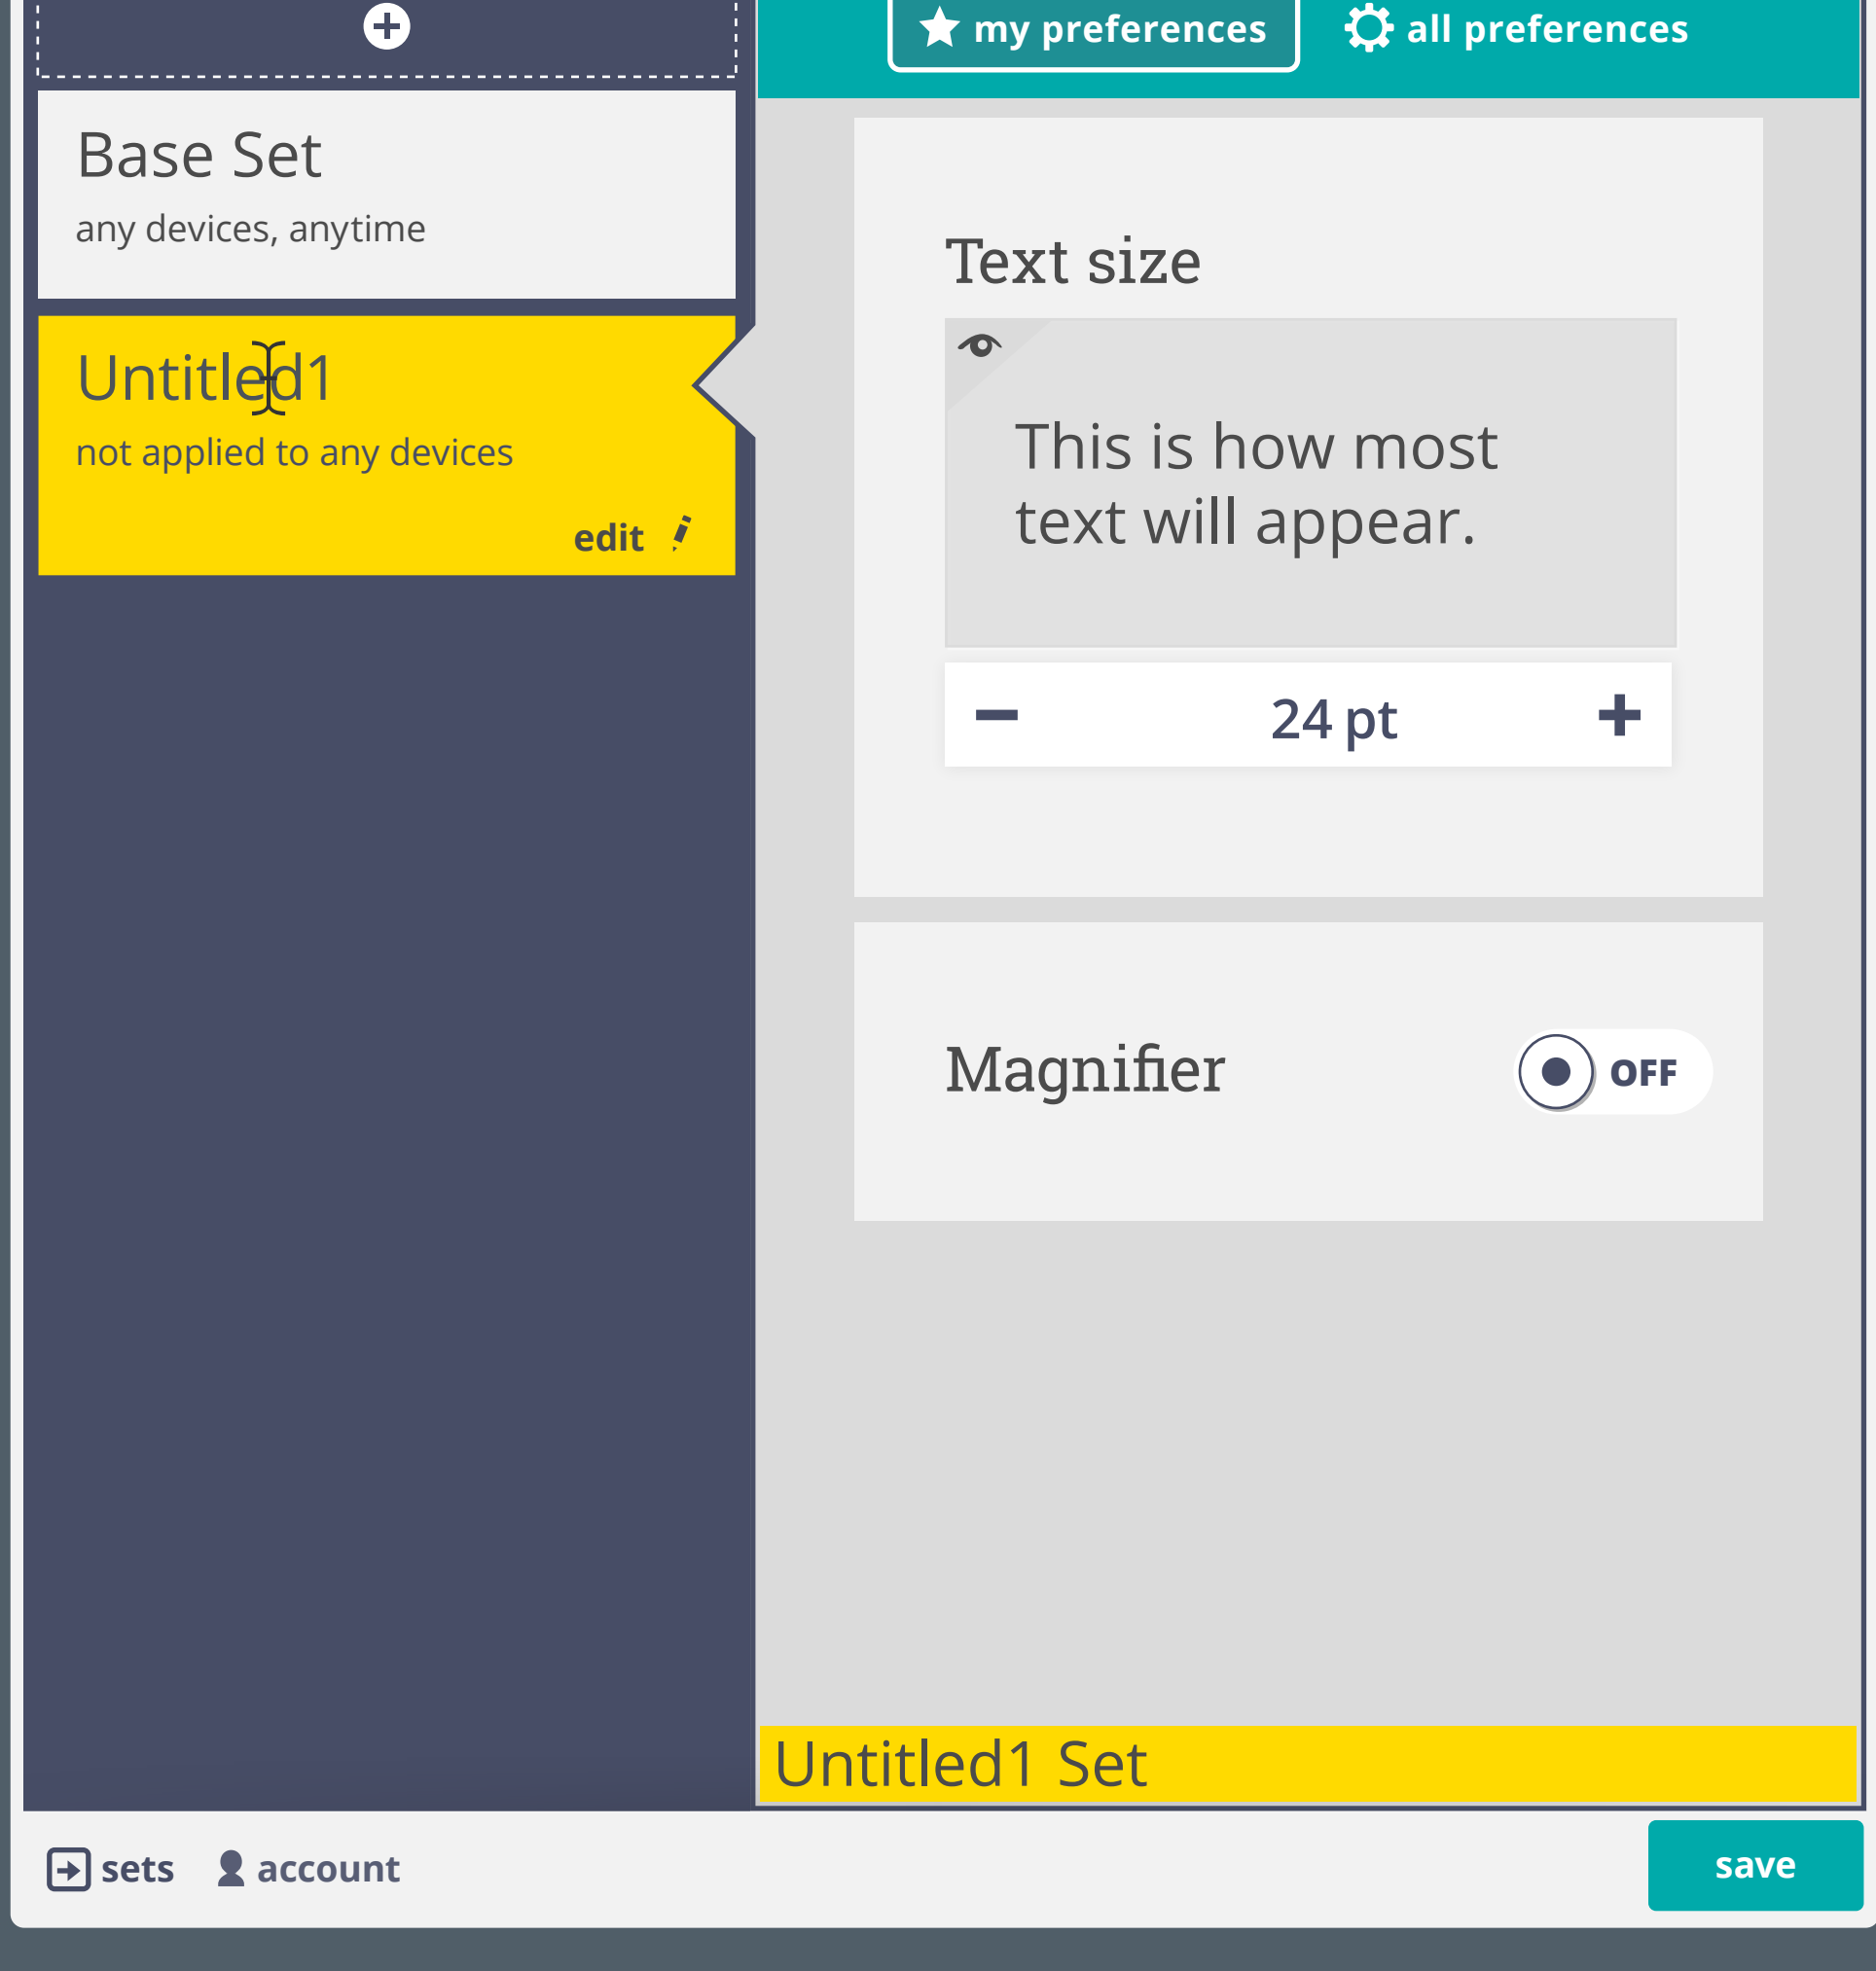

PMT view showing sets panel in expanded state.
Highlighted set has preferences contained in that set revealed in panel on the right

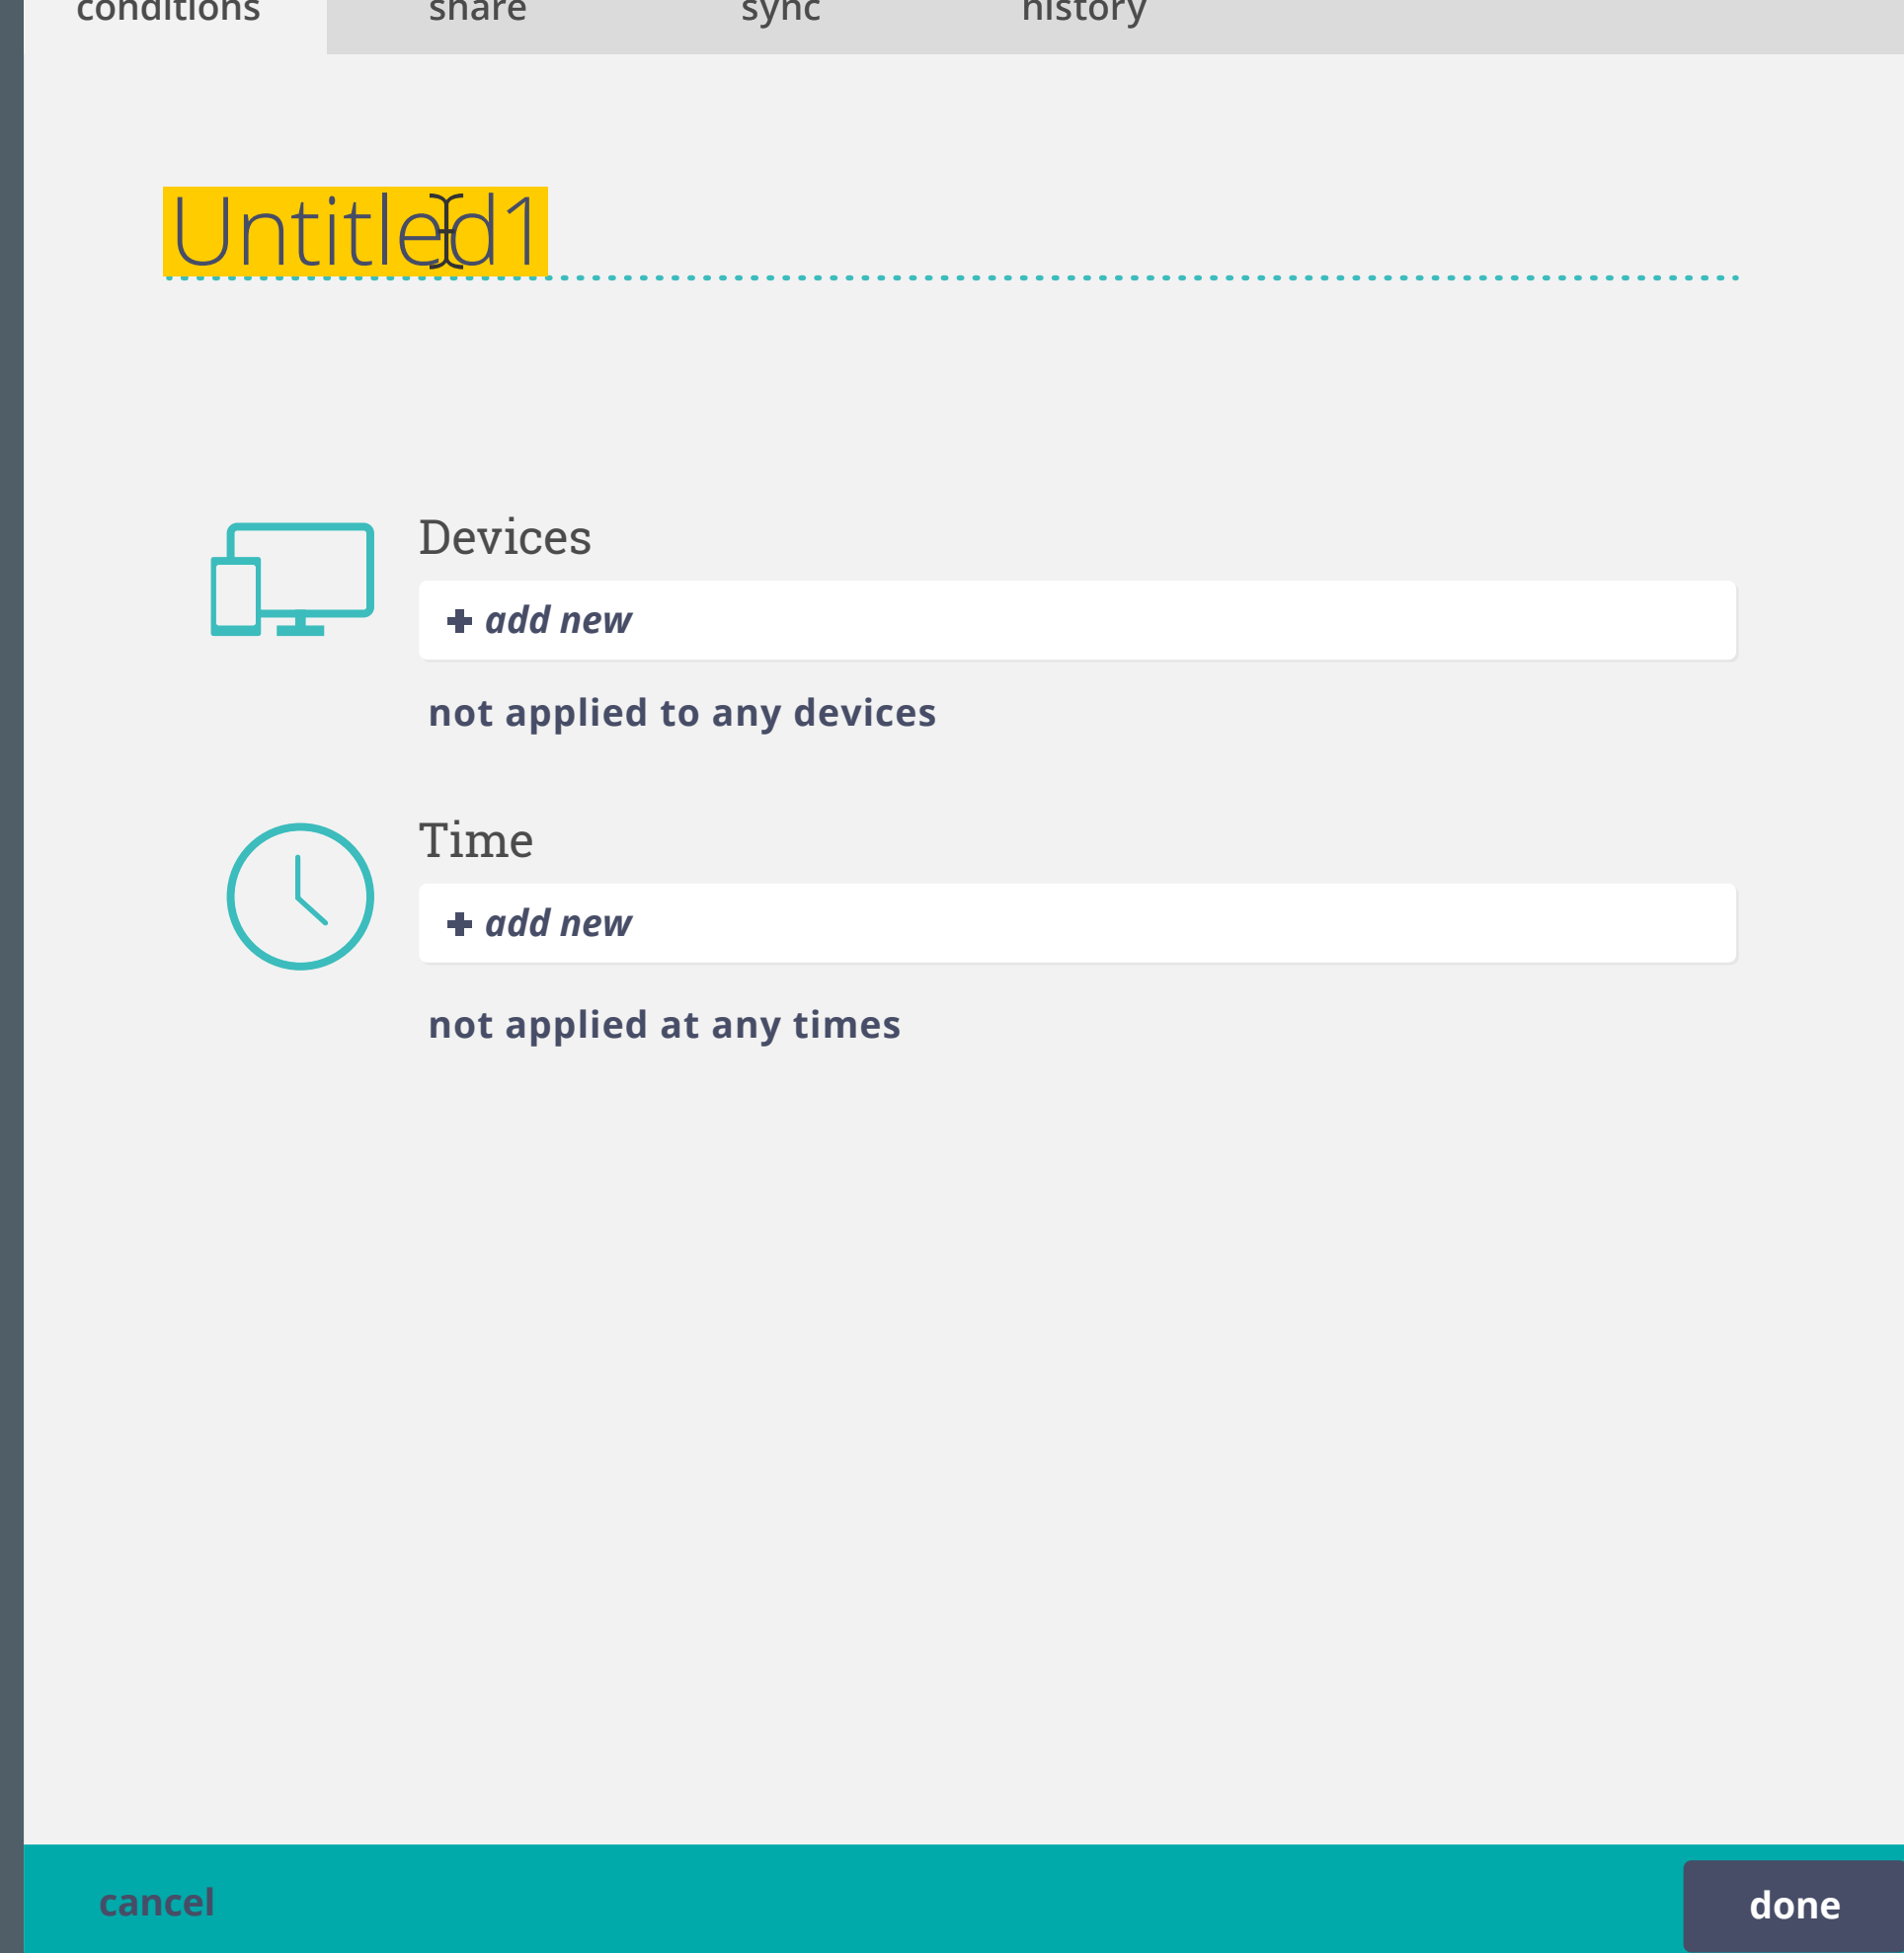

add new set by selecting “+” sign in left panel (hover state shown)

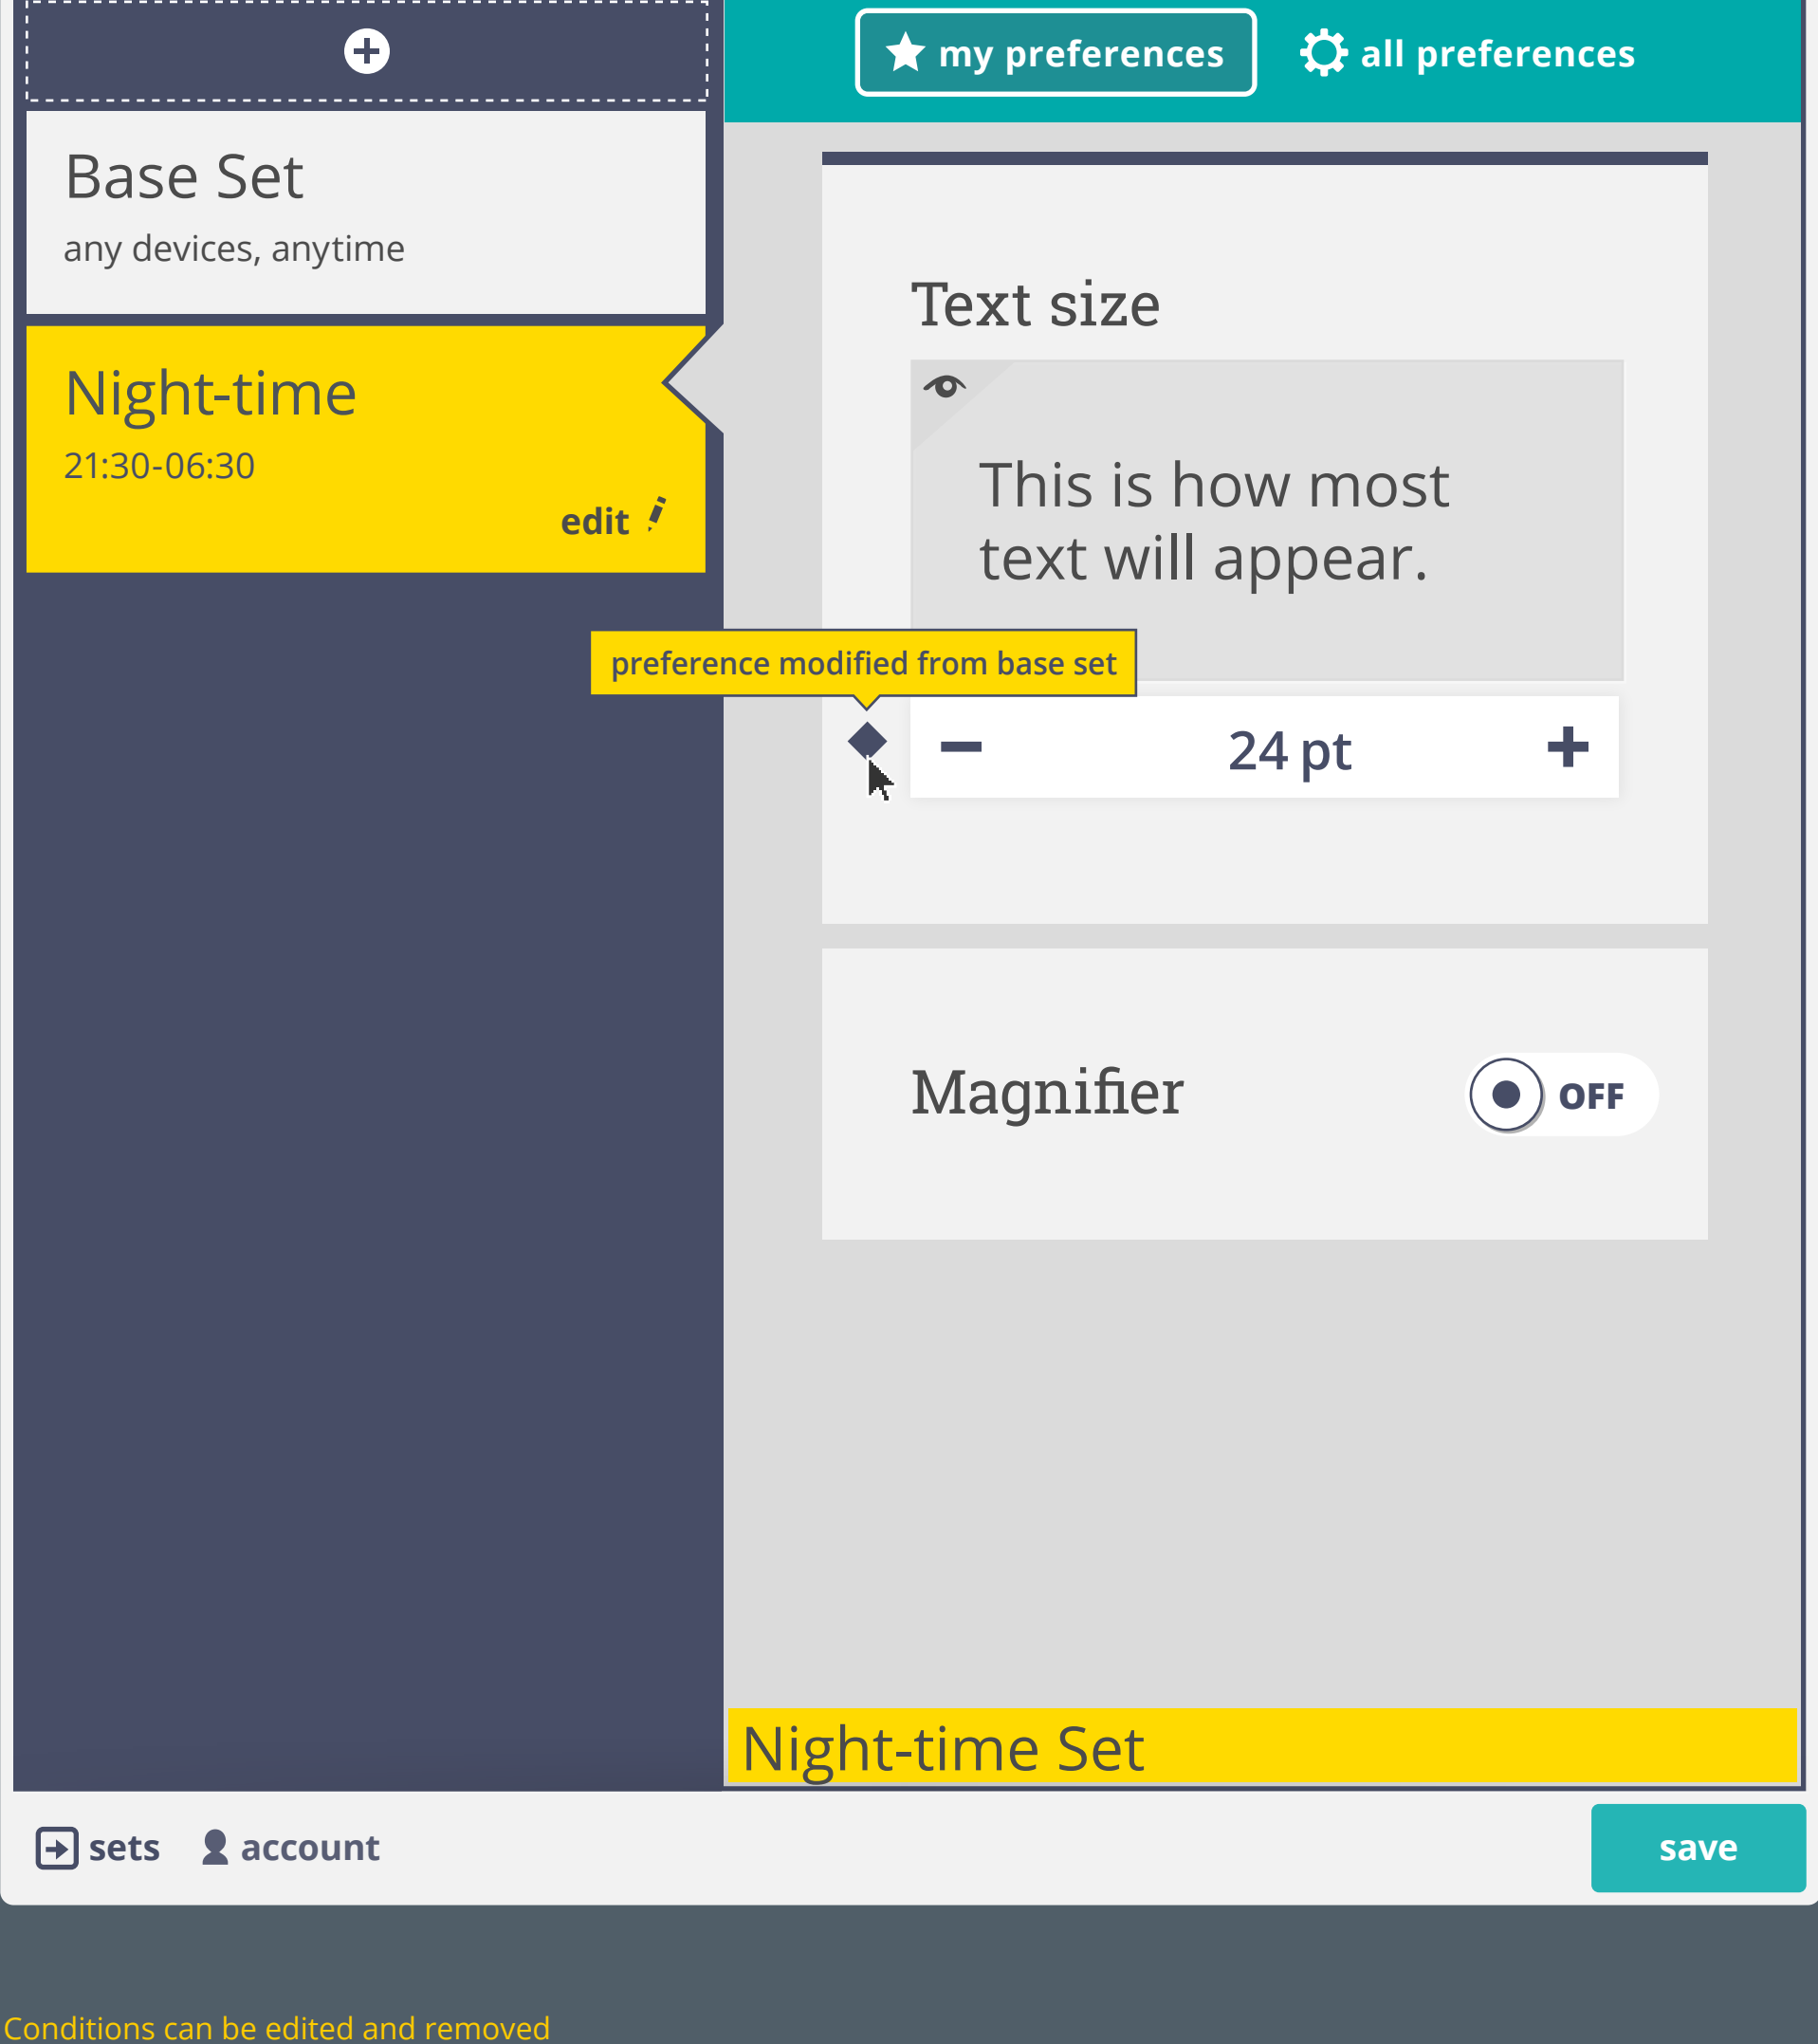

New set appears in list with “not applied to any devices”
>new set is populated with base set prefs until user adjusts/adds/removes preferences
> set name is directly editable

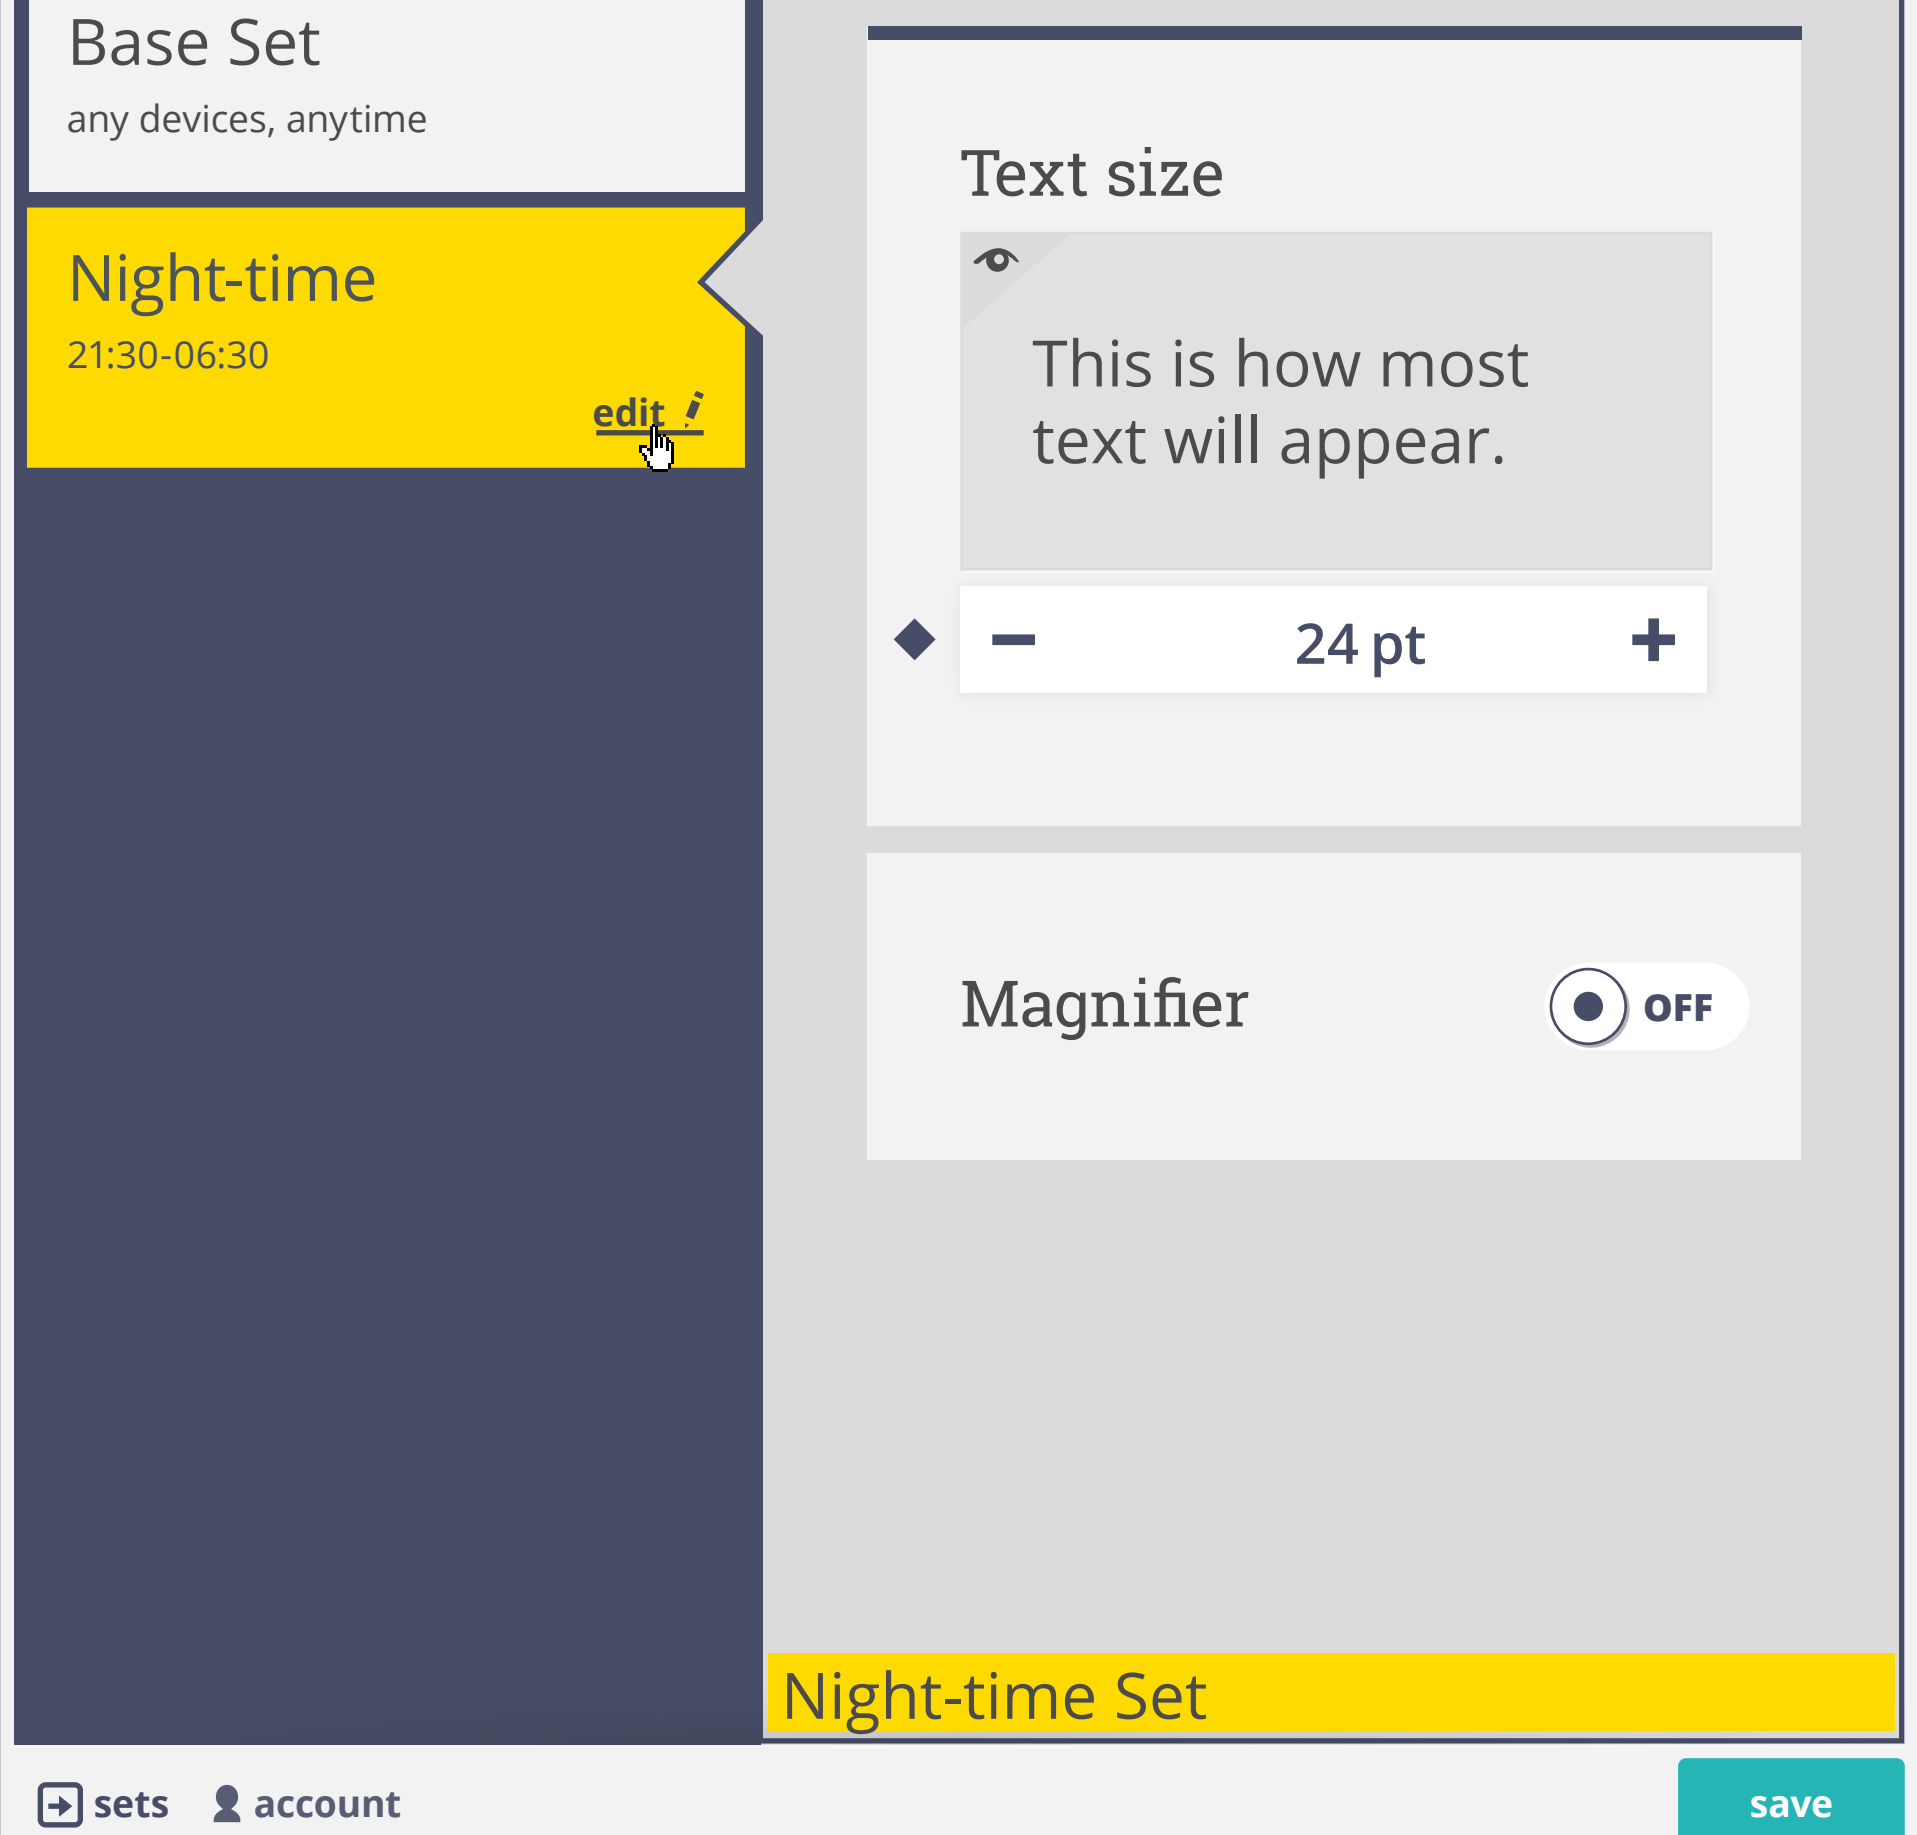

Selecting “edit” in sets panel takes user to conditions/share/sync/history tabbed view
‘Conditions’ tab allows user to manually adjust the contexts a set gets applied in
Conditions are editable in all sets except the ‘Base Set’
> the ‘Base Set’ is applied on all devices, at all times, unless overridden by a conditional set
New set begins with no conditions (will not be applied anywhere until user adds conditions)
>(default to “apply to all devices” for review?)
Set name is editable in conditions view also

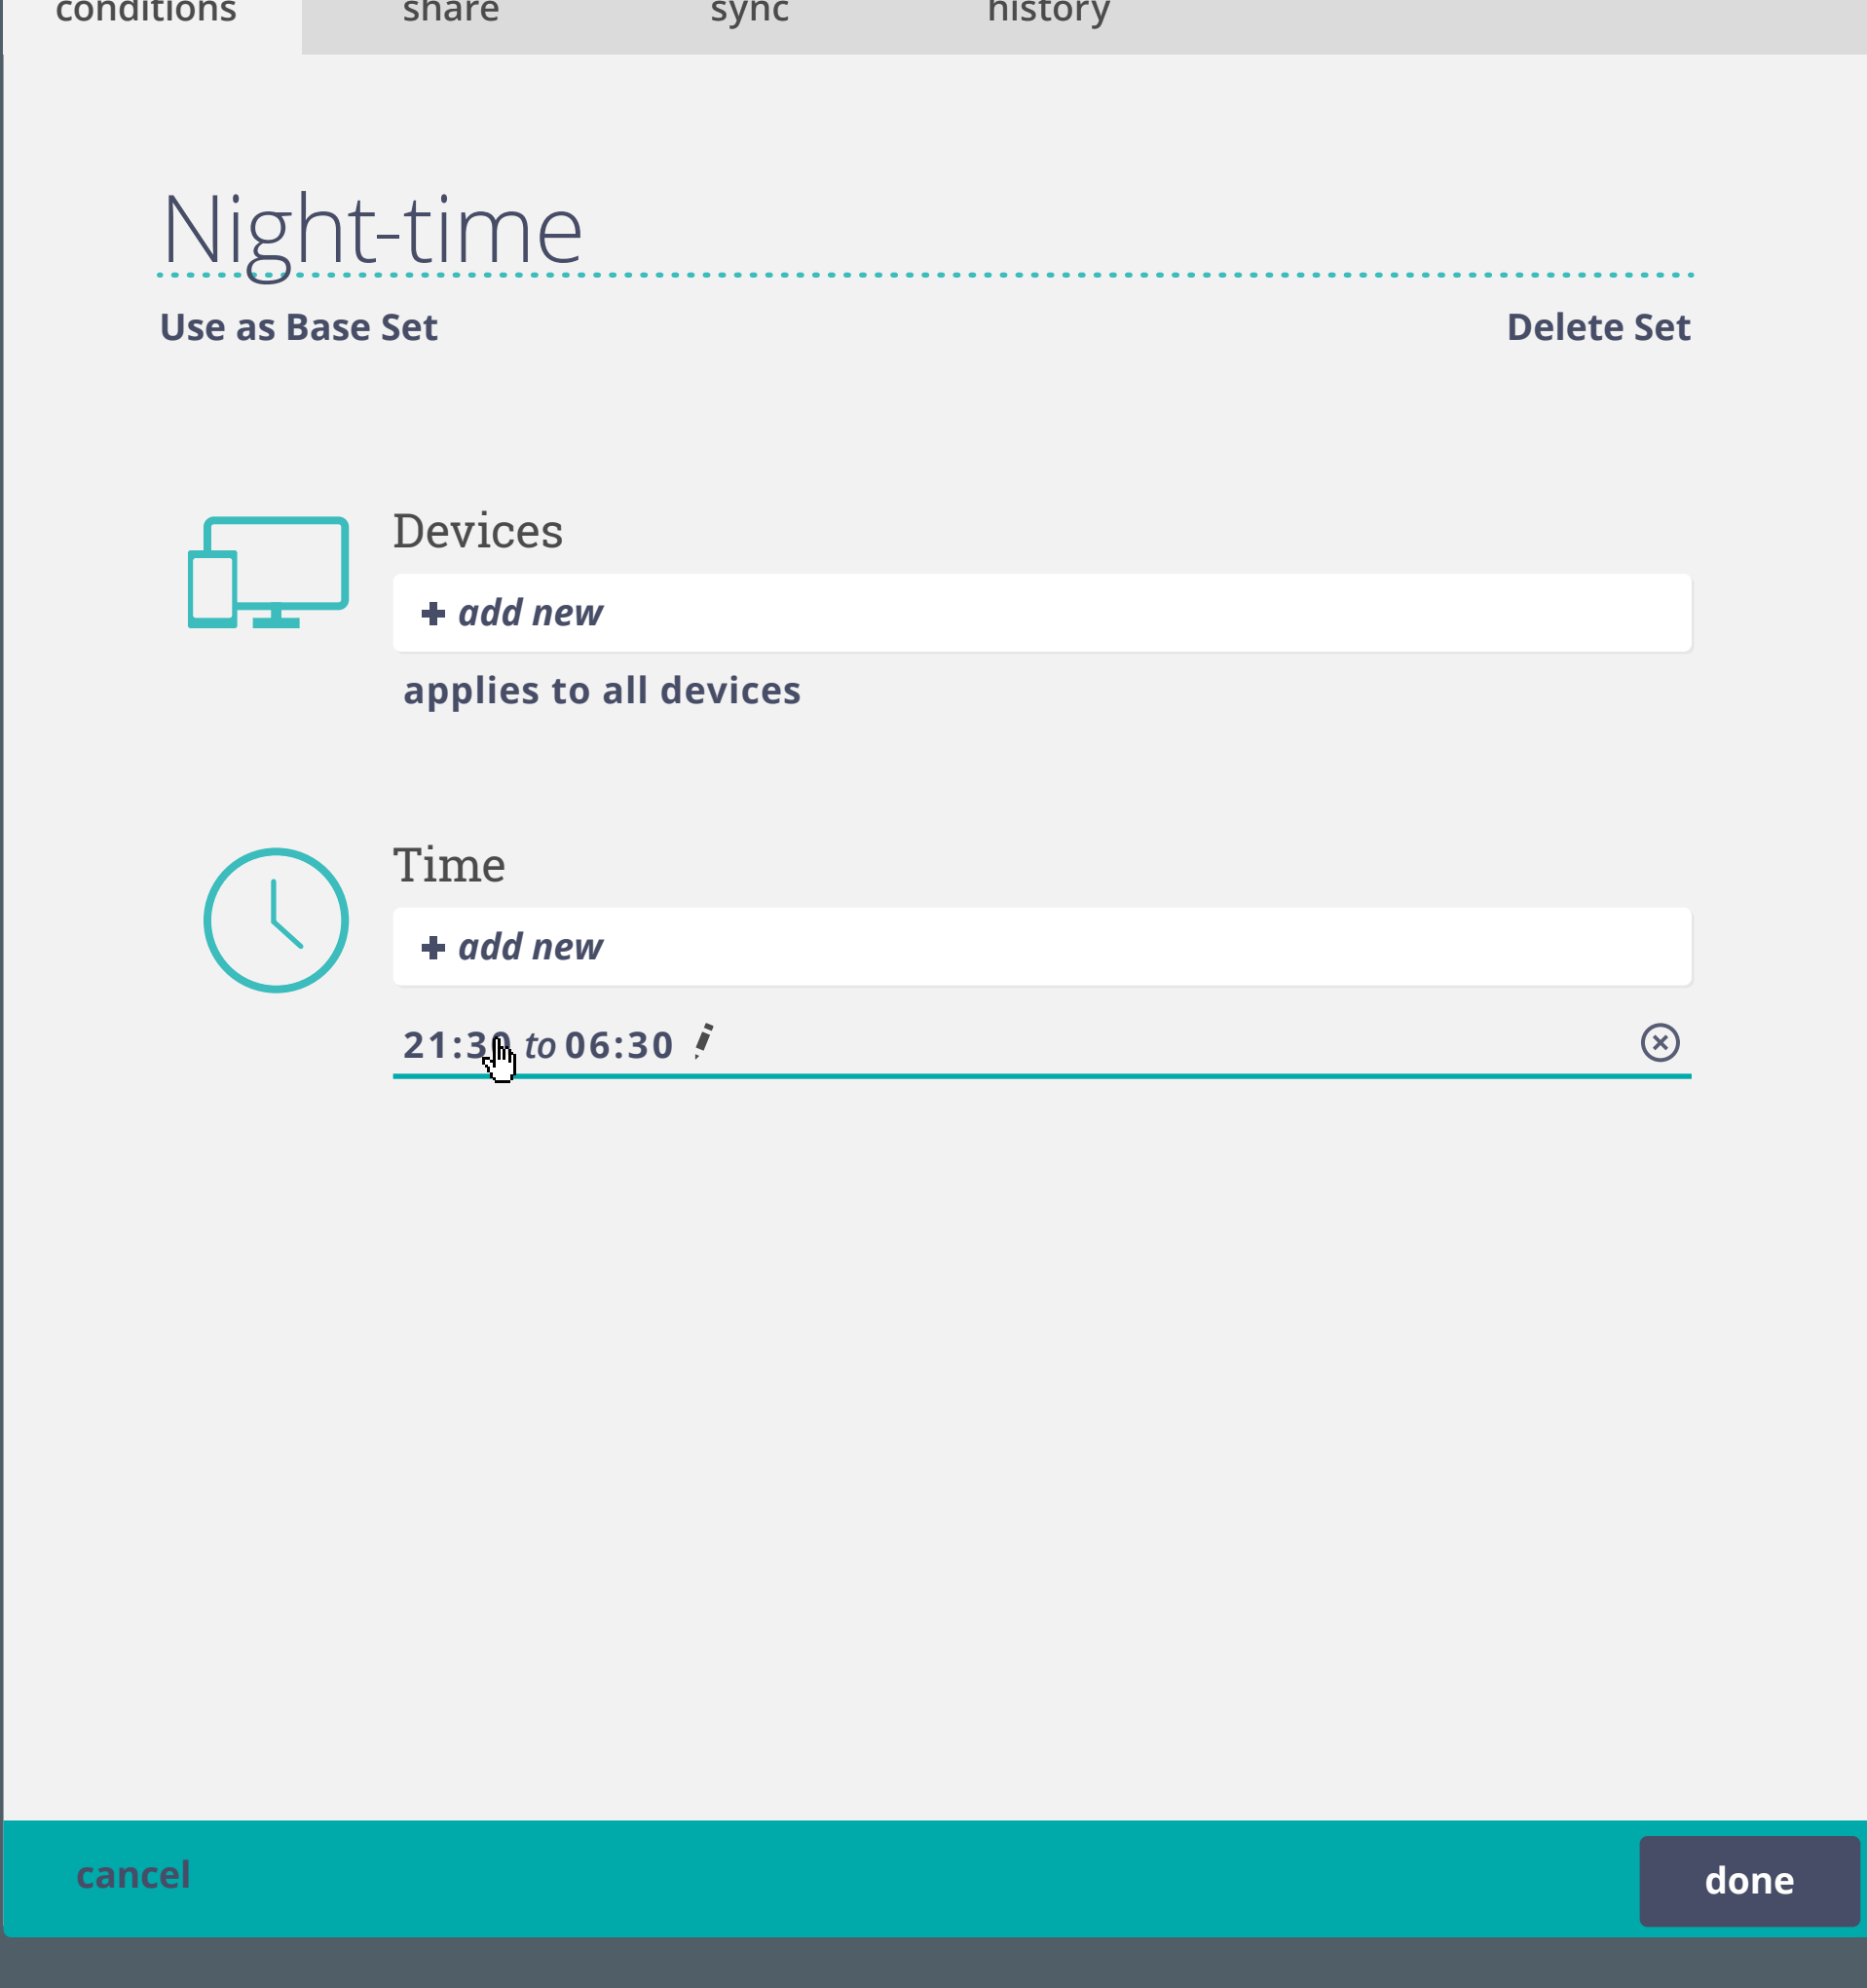

PMT general view
Selecting a set (select set name / box) brings up the 'my preferences' of that set. Edit option appears once selected.
Indicators (dark blue line and diamond beside adjuster) show which preferences have been modified from the 'Base set'

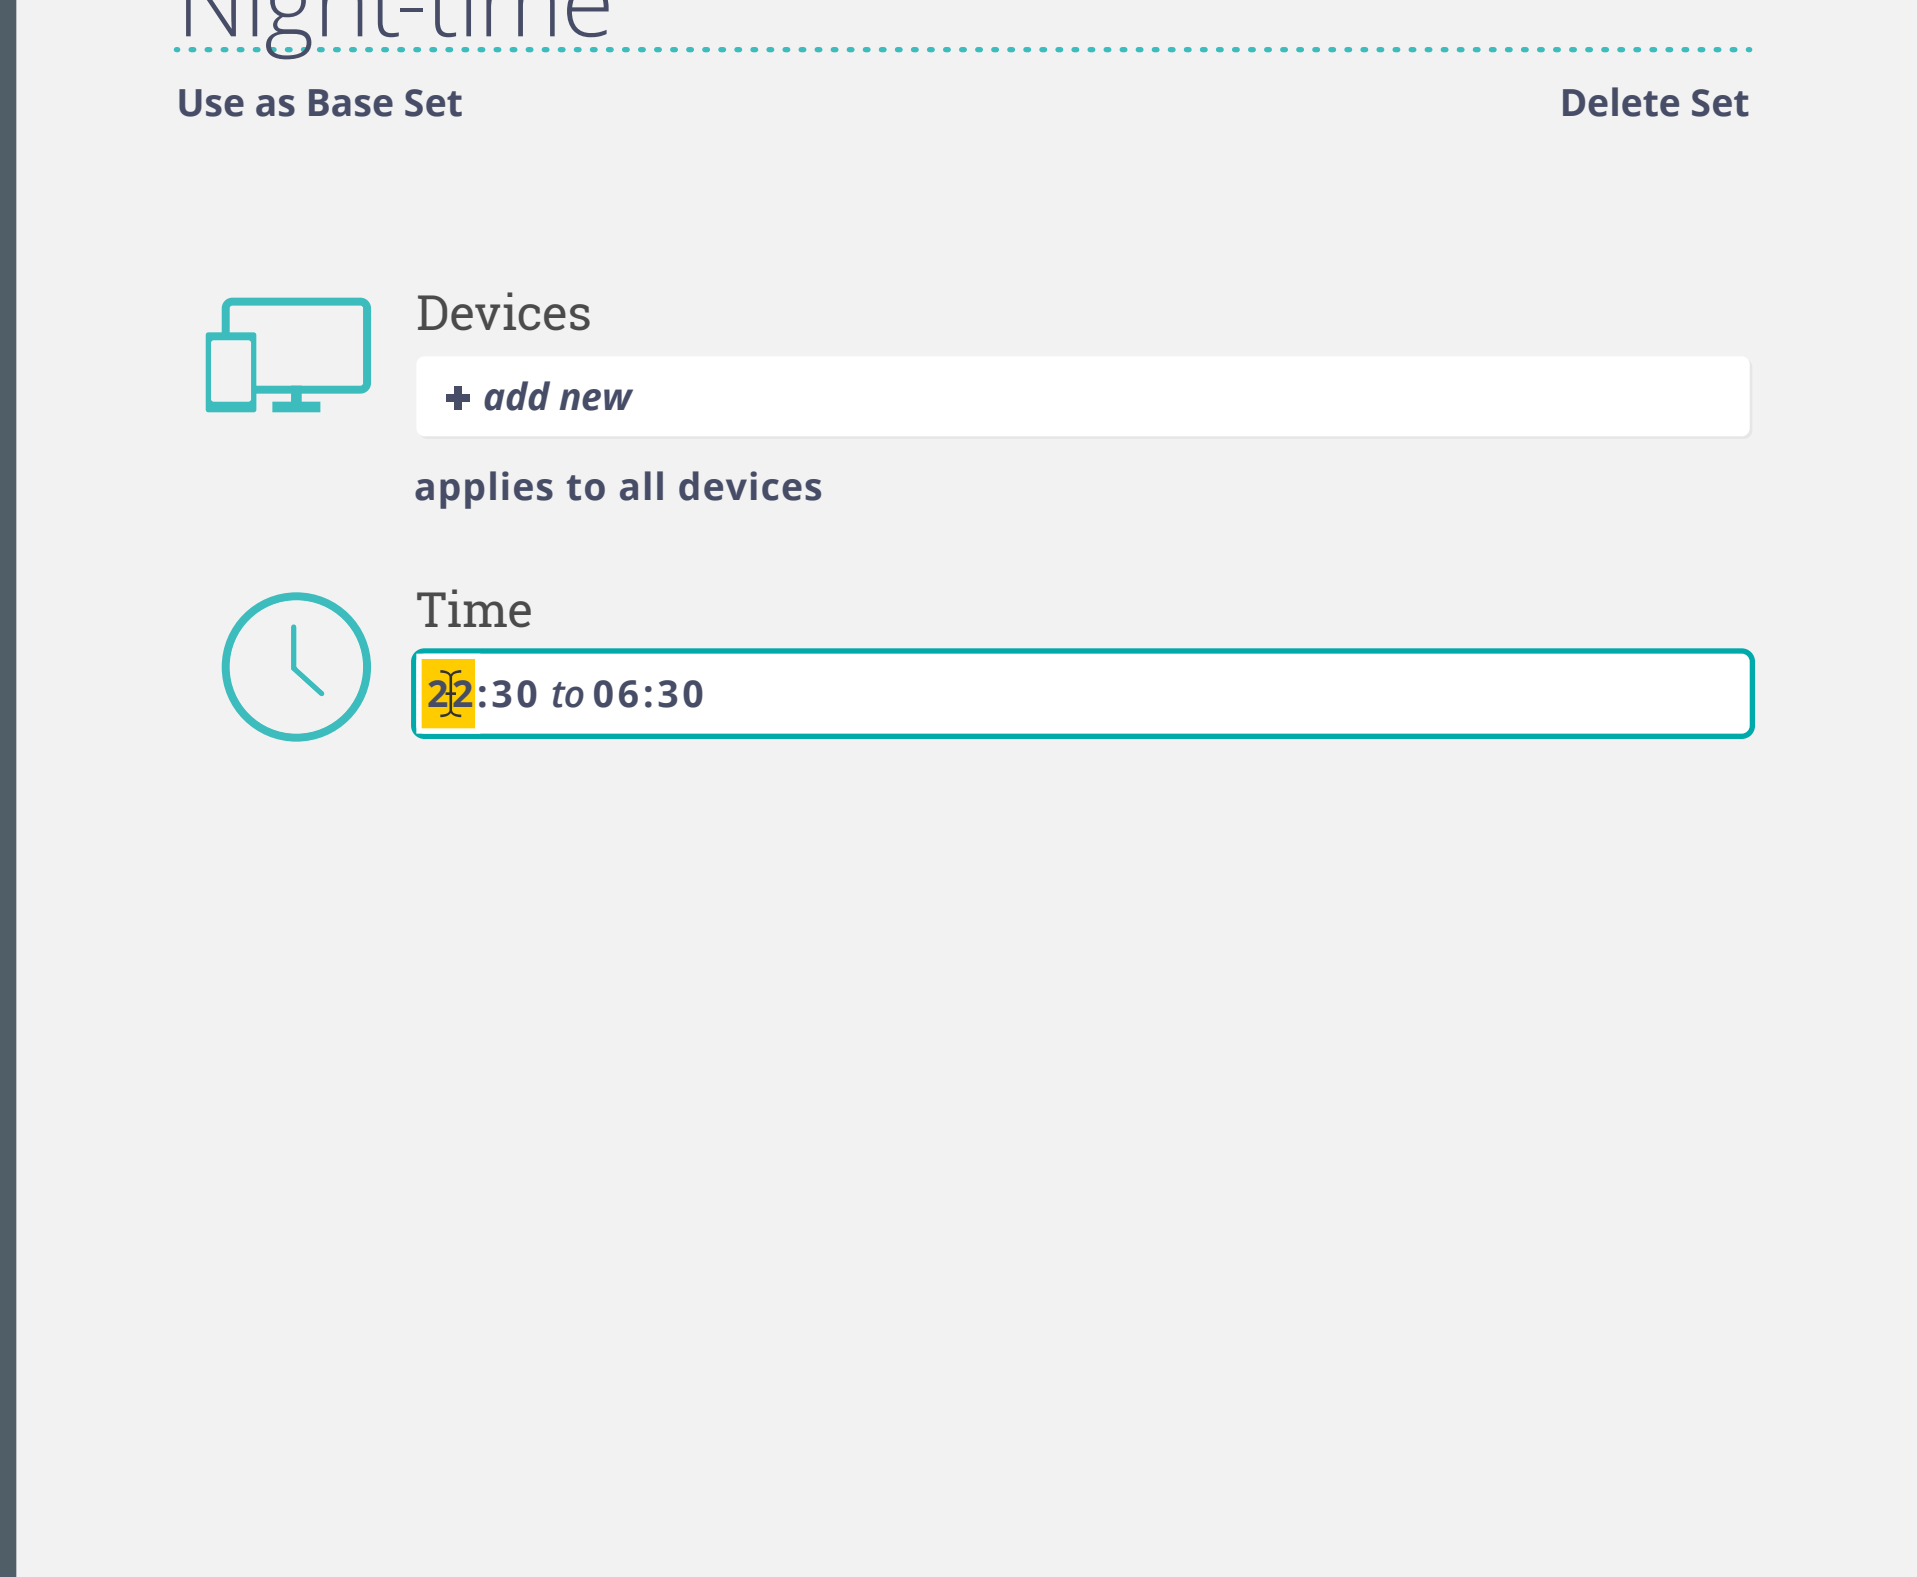

Conditions can be edited and removed

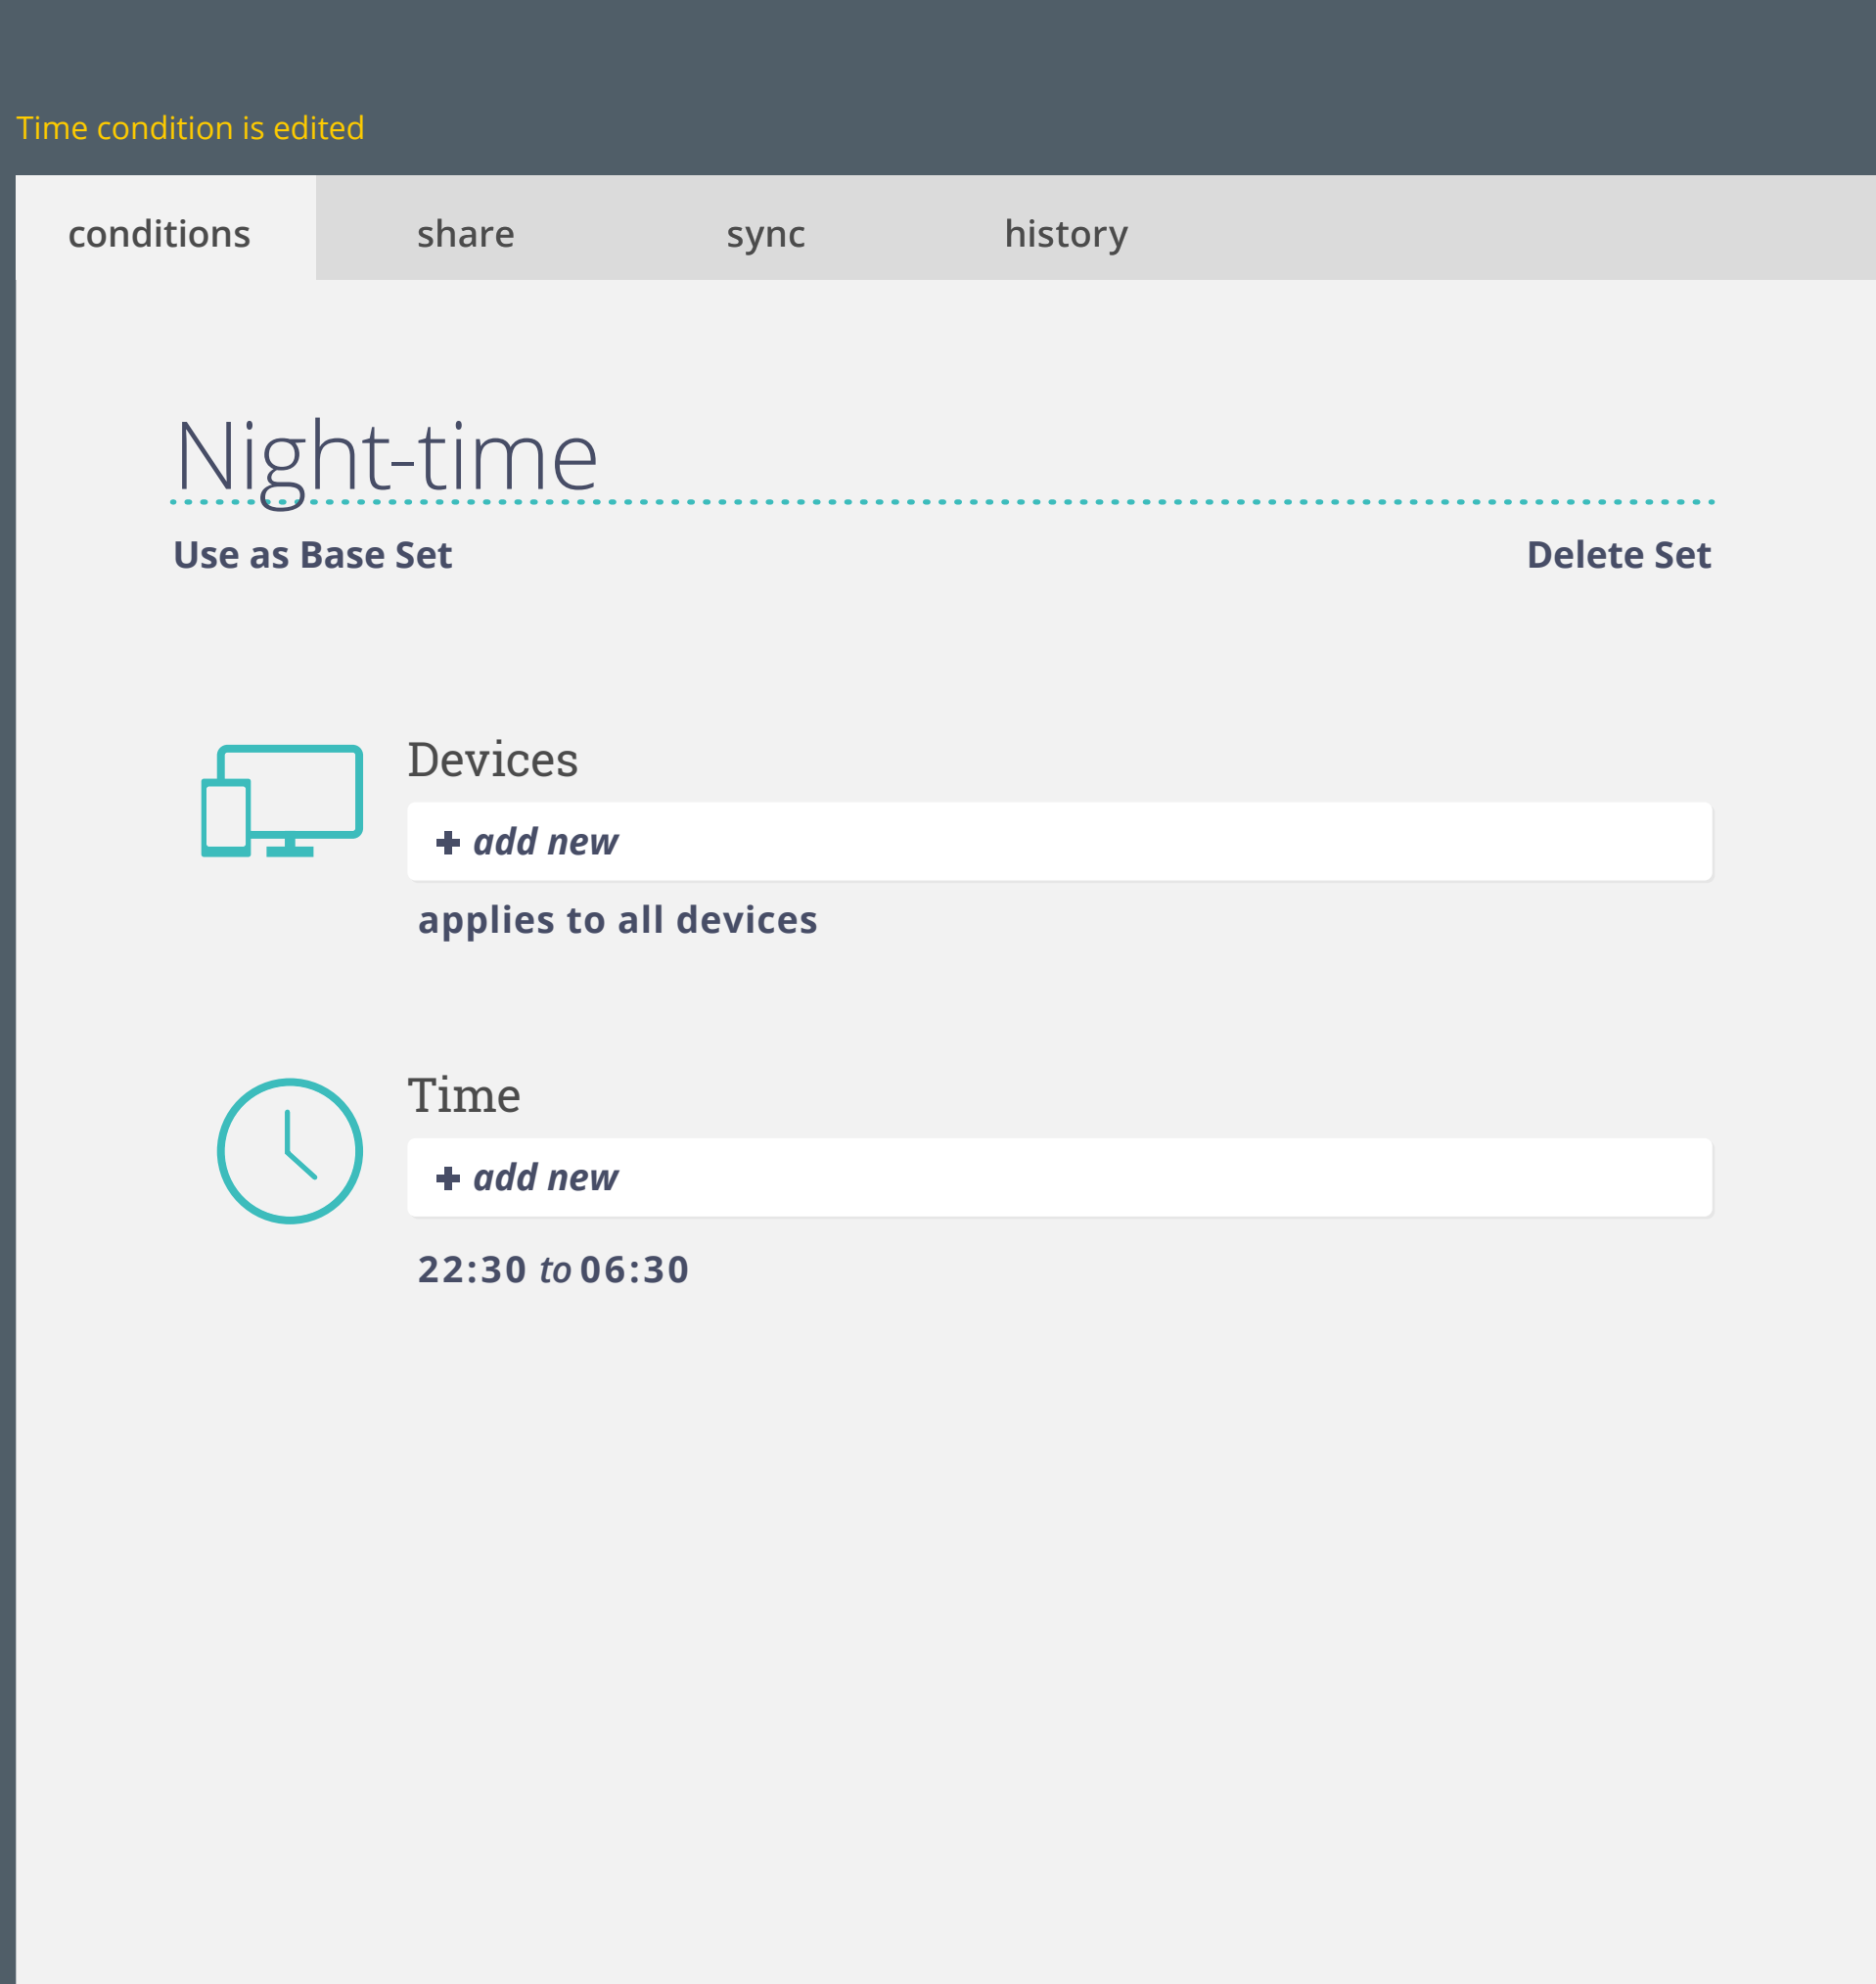

Conditions can be edited and removed

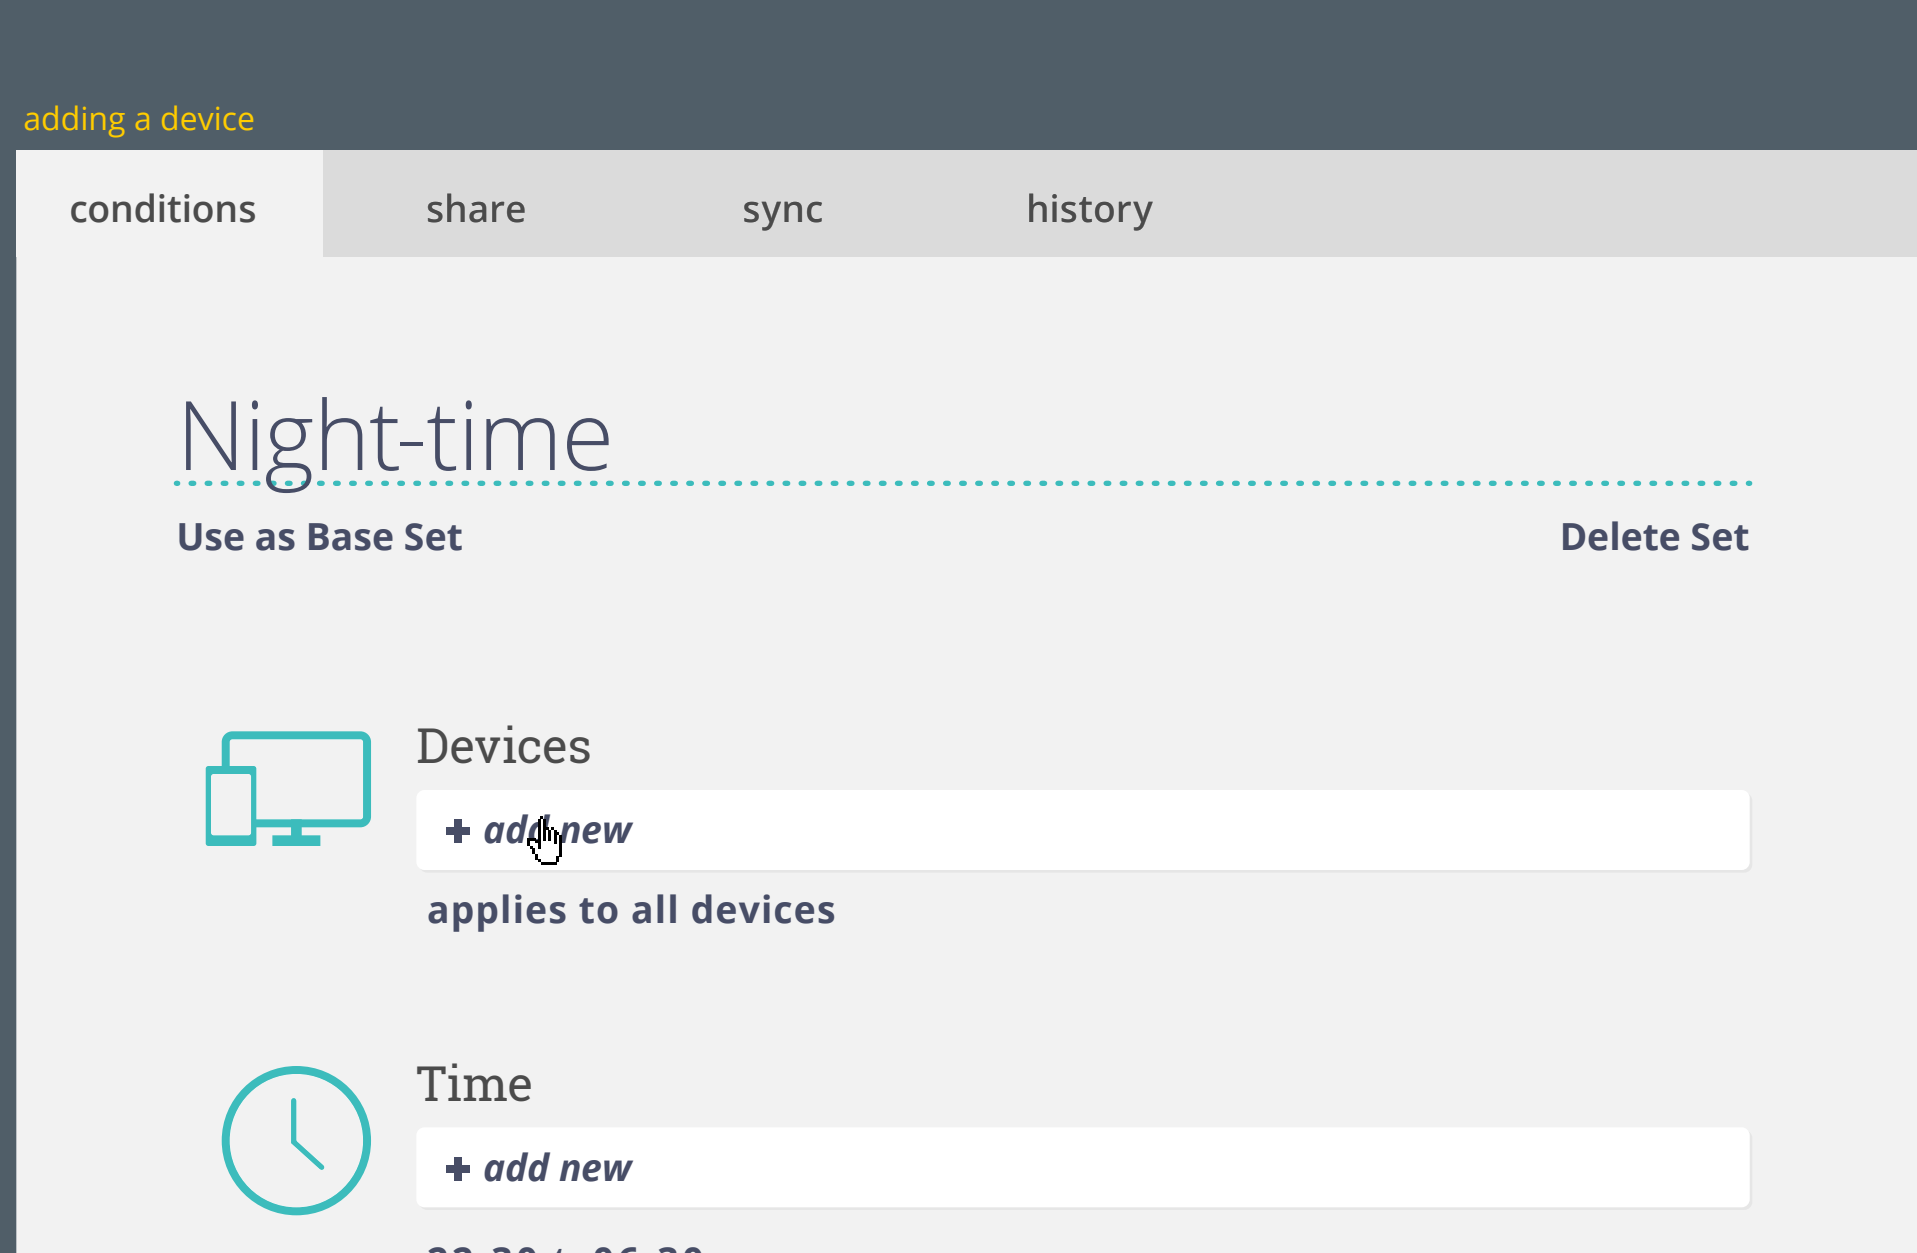

Editing Time context
>Individual number fields are text-editable or adjusted using arrow keys
>Mouse-clicking outside of edit field, tabbing out of edit field, or selecting enter will enter edited values
>escape to cancel entry

selected

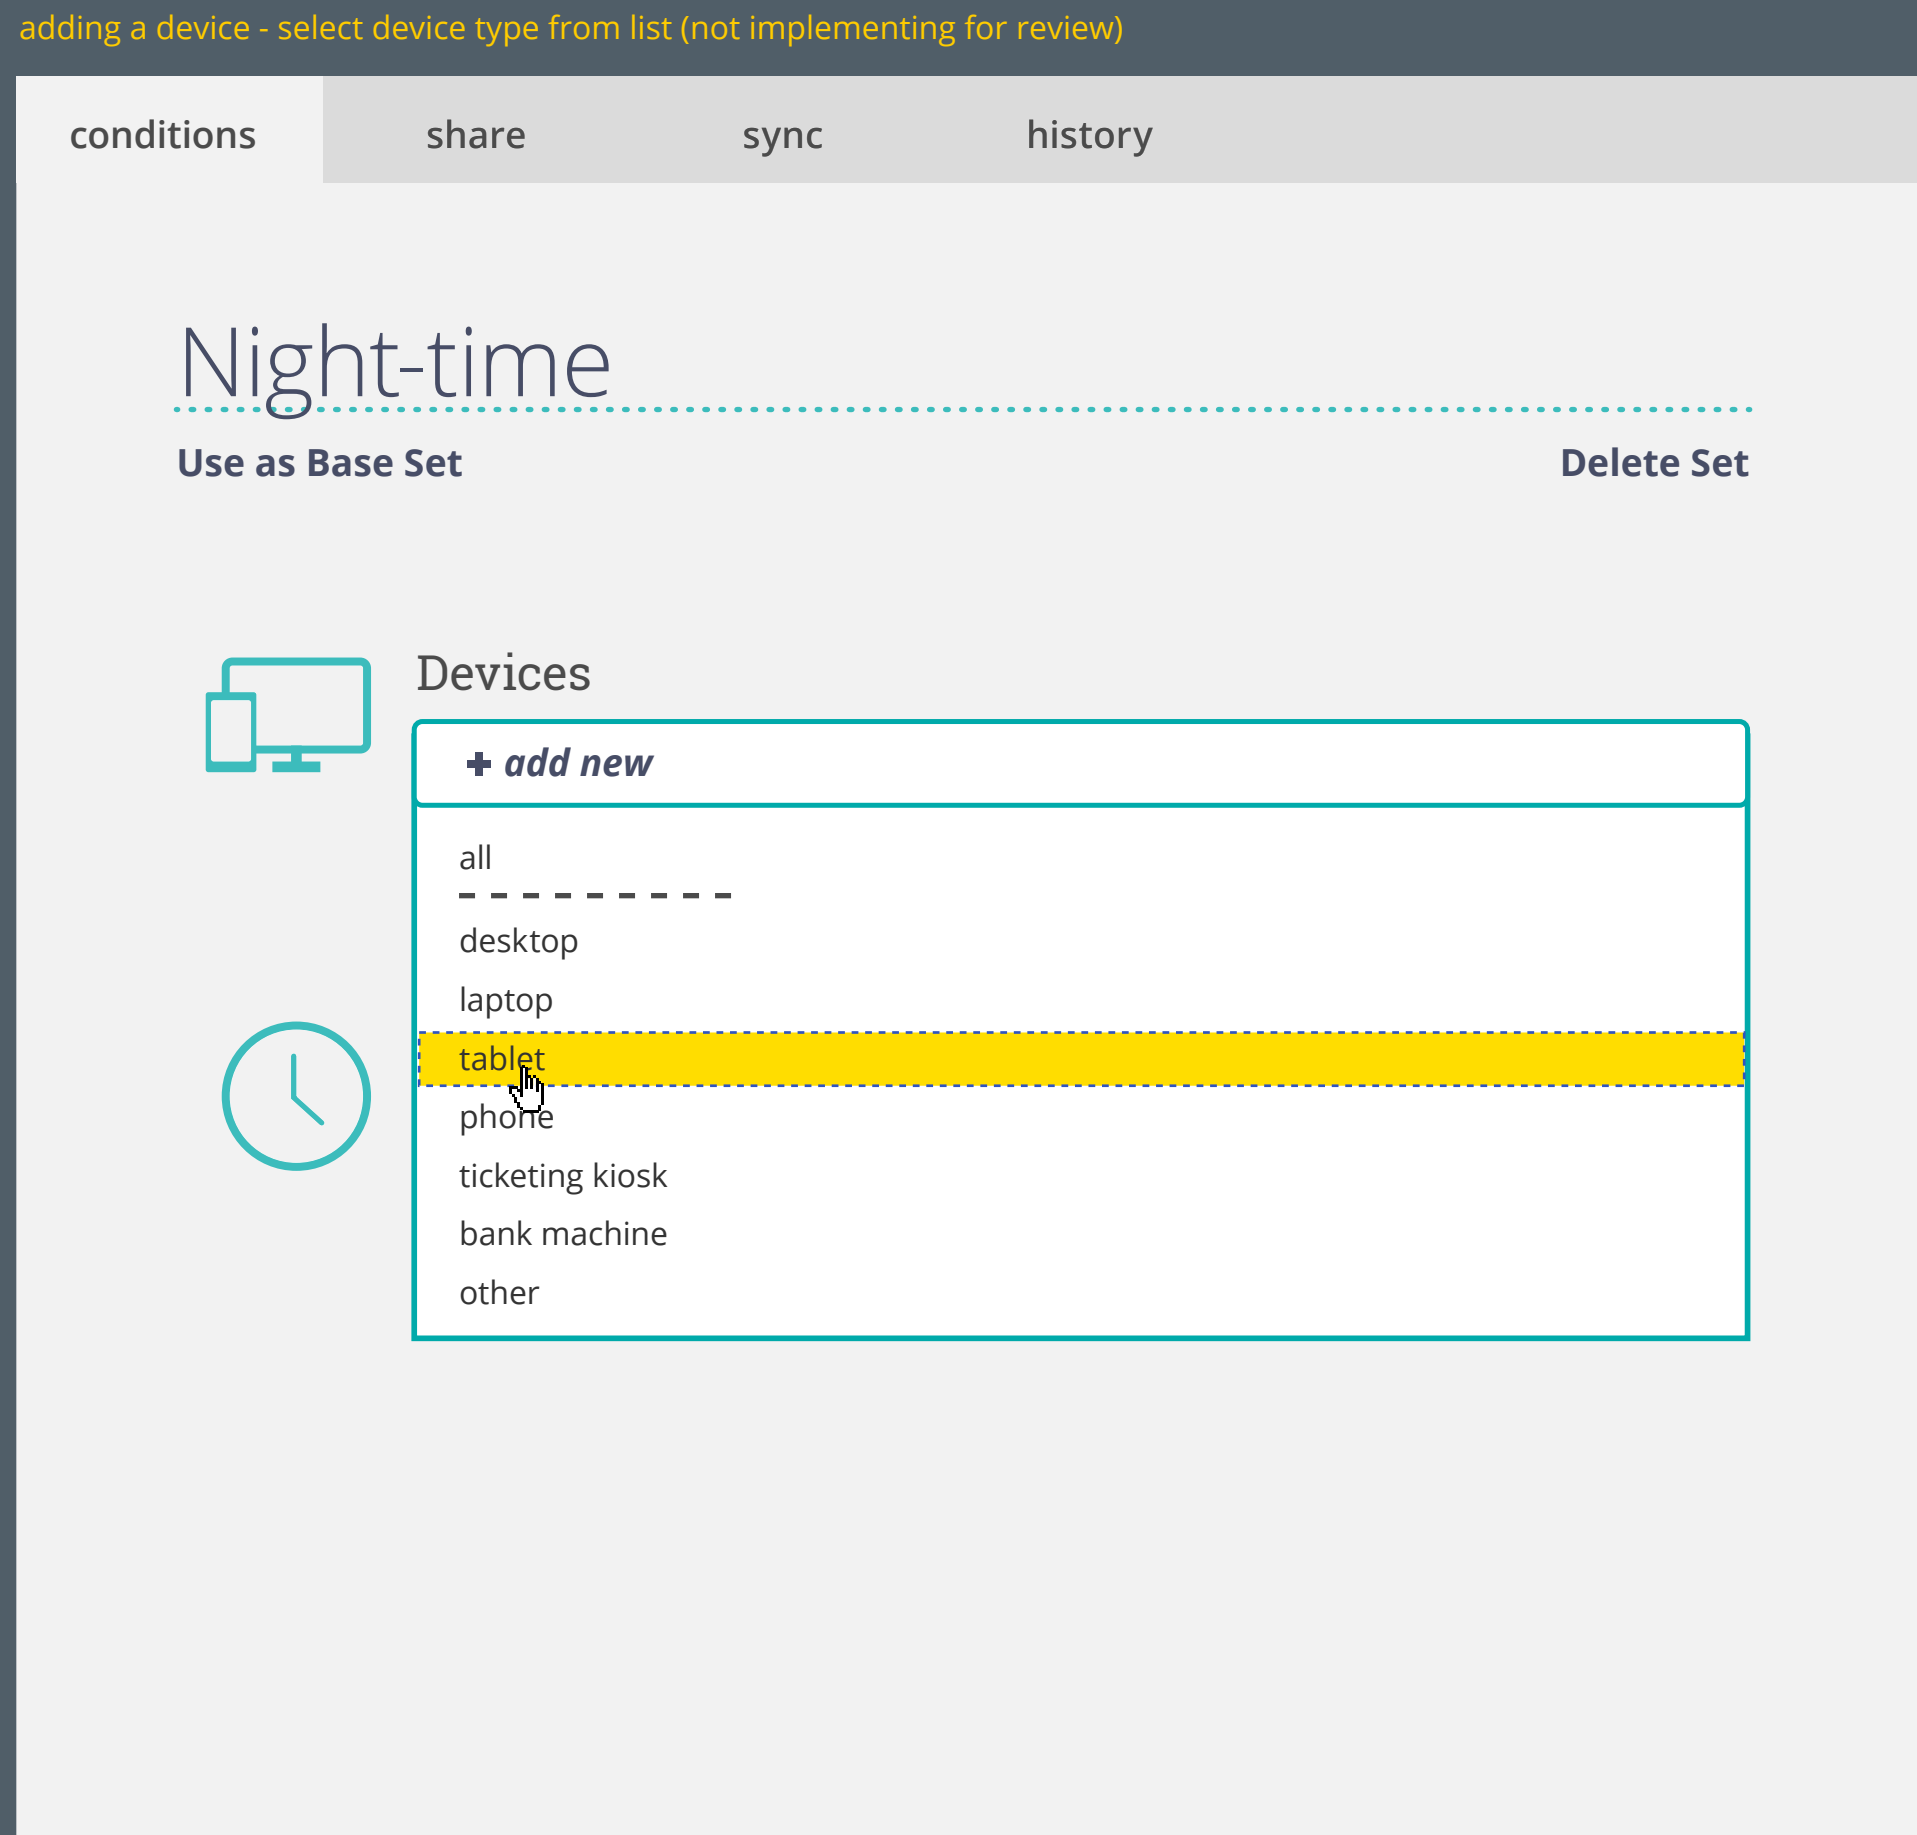

Time condition is edited

adding a device

adding a device - select device type from list (not implementing for review)

When a set is first created, it has no contexts (including no devices)
Note: for review we may want to default to "applies to all devices", since user will not be able to add any devices
