Matchmaker feedback example?
An adjuster that allows a user to select their prefered solution. This adjuster would always be available in the PMT, and only in the PCP when there are overlapping solutions.
In the case of step 15, the system would select a screen reader to get the user started, then show a notification to the user where this could be changed from in the PCP. The
notification would only happen if the user has not indicated a preferred screen reader previously or their preferred screen reader is unavailable but others are.
