Selecting a set brings up the 'my preferences' of that set Indicators show which preferences have been modified from the 'Base set'

In order to apply the selected set to the current environment, user needs to select 'apply' > this modifies conditions to allow for the current environment to use the set

'Edit settings' takes user into the advanced set settings

'Conditions' tab allows user to manually adjust the environment a set gets applied under

Conditions are editable in all sets except the 'Base Set' > the 'Base Set' is applied on all devices that are not effected by a conditioned subset

If a set has no conditions specified, it is not applied to any device
