Fluid

Topics We'll Cover

- About Fluid and Infusion
- Benefits of Mobile Web Apps
- Mobile Web App Pain Points
- How Infusion Can Help

What is Fluid

<http://fluidproject.org>

- Is an Open Source community of
 - Designers
 - Developers
 - Accessibility Experts
- Helps other open communities
- Consists of universities, museums, and individuals

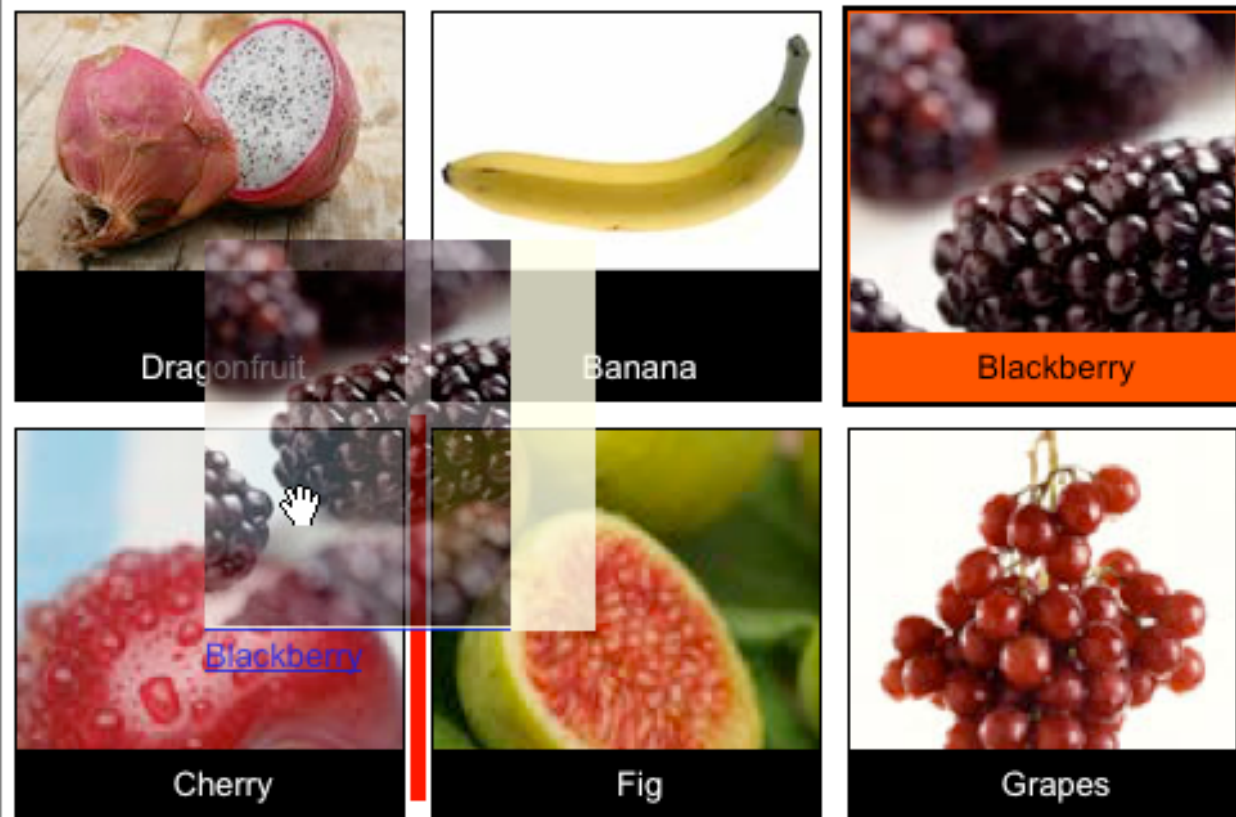

What is Fluid Infusion

- Application Framework built on top of jQuery
- Lightweight CSS Framework (FSS)
- UI Components you can reuse and adapt
- Open architecture: everything is configurable
- Designed for Usability and Accessibility

Infusion Components

<http://build.fluidproject.org/infusion/demos/>

Image Reorderer Example

Why Mobile Web Apps?

Simplify development

Objective-C

Cocoa Touch

Java

Android SDK

C++

Carbide

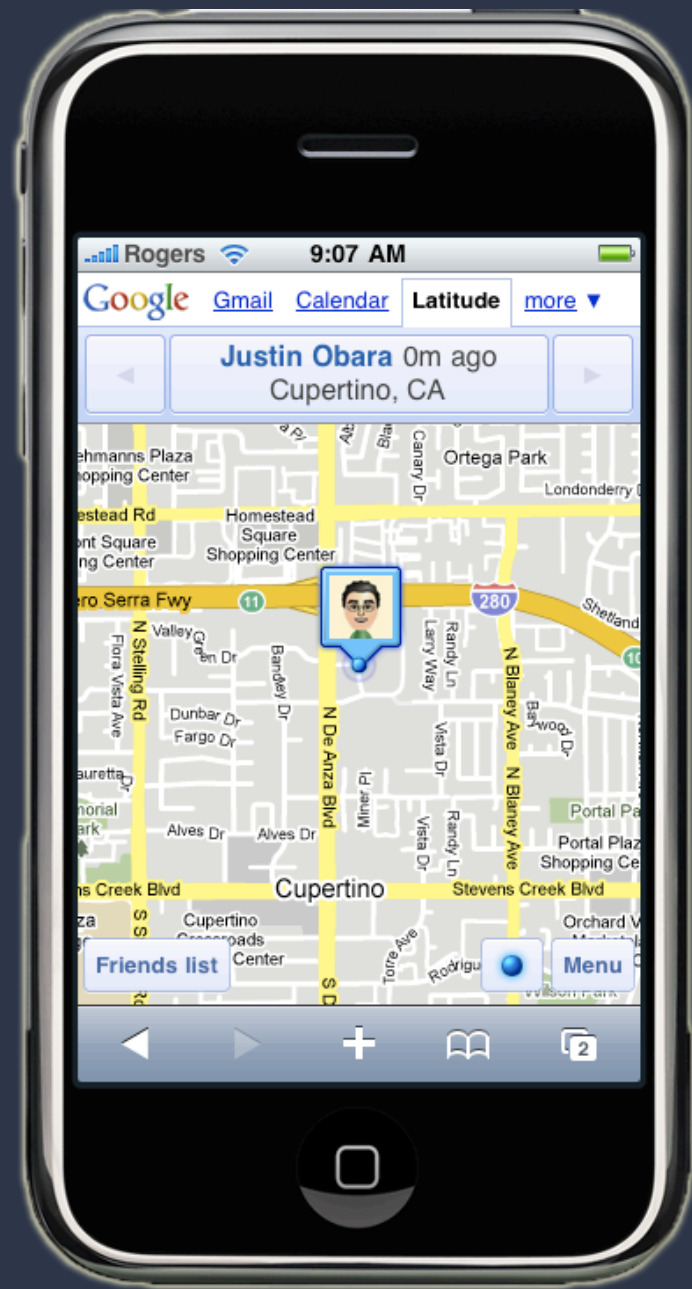

Why Mobile Web Apps?

Simplify development

HTML, CSS, JS

Benefits of Mobile Web Apps

- Modern phones have great browsers
- Web is ubiquitous and familiar
- HTML, CSS, and JavaScript

Google Latitude

Mobile Web Pain Points

- Sparse documentation
- Few successful Open Source examples
- Existing frameworks have limitations

Mobile Web Pain Points

Sparse Documentation

- Lots of uncharted territory...

only into the padding area enclosed by the border.

Availability
Available in Safari 3.0 and later.
Available in iPhone OS 1.0 and later.

Support Level
Under development.

-webkit-background-origin
Determines where the background-position property is anchored.

Syntax

```
-webkit-background-origin: origin
```

Parameters
origin
The origin of the background position.

Discussion
The background position can be anchored at the upper-left corner of the border, the upper-left corner of the content area, or the upper-left corner of the content inside the padding area.

Availability
Available in Safari 3.0 and later.
Available in iPhone OS 1.0 and later.

Support Level
Experimental CSS 3.

Mobile Web Pain Points

Existing Frameworks

Frameworks:

jQTouch iUI WebApp.Net Magic Framework

- Workflow
- JavaScript Footprint
- Flexibility of themes

How Infusion Can Help The Fliquor App

<http://tinyurl.com/fliquor>

- Demonstration of Using Fluid Infusion
 - Search public images on Flickr

Fliquor

fliquor

Search!

How Infusion Can Help

- Loose coupling (DOM Agnosticism)
- Template driven
- Fast and flexible styling (FSS)

DOM Agnosticism

Component code is maximally unaware of the details of the markup layout that it operates on.

DOM Binder

- Relaxes the coupling between the code and the markup

DOM Binder

- Uses named selectors
 - Explicit selectors never appear in code
 - Code is free of baked dependences on markup
- Attached to a component with call to `fluid.initView`

DOM Binder

Options

```
fluid.defaults("fliquor.imageViewer", {  
  selectors: {  
    searchButton: ".flc-fliquor-searchButton",  
    searchBox: ".flc-fliquor-search",  
    template: ".flc-fliquor-template",  
    images: ".flc-fliquor-images",  
    ...  
  },  
  ...  
});
```

locate

```
that.locate("searchBox").fluid("activatable",  
  that.search);  
  
that.locate("searchButton").click(function (evt) {  
  that.search();  
  return false;  
});
```

HTML Template

- Components render based on Template
- Code has no dependence on markup structure
- Markup is not in code

HTML Template

```
<body class="flc-fliqor fl-theme-coal">
  <div class="fl-centered fl-navbar fl-table search-bar">
    ...
  <div class="fl-centered results">
    <ol class="flc-fliqor-images fl-list-menu fl-list-thumbnails fl-thumbnails-expanded">
      <li class="flc-fliqor-template">
        <a href="#">
          <span class="wrapper">
            <span class="flc-fliqor-item-title fl-fliqor-item-title">Title</span>
            
          </span>
        </a>
      </li>
    </ol>
  </div>
  ...
</body>
```

HTML Template

- Fully customizable
- As semantic as possible
- ARIA added via JavaScript
- Presentation class names separated from Javascript selector names

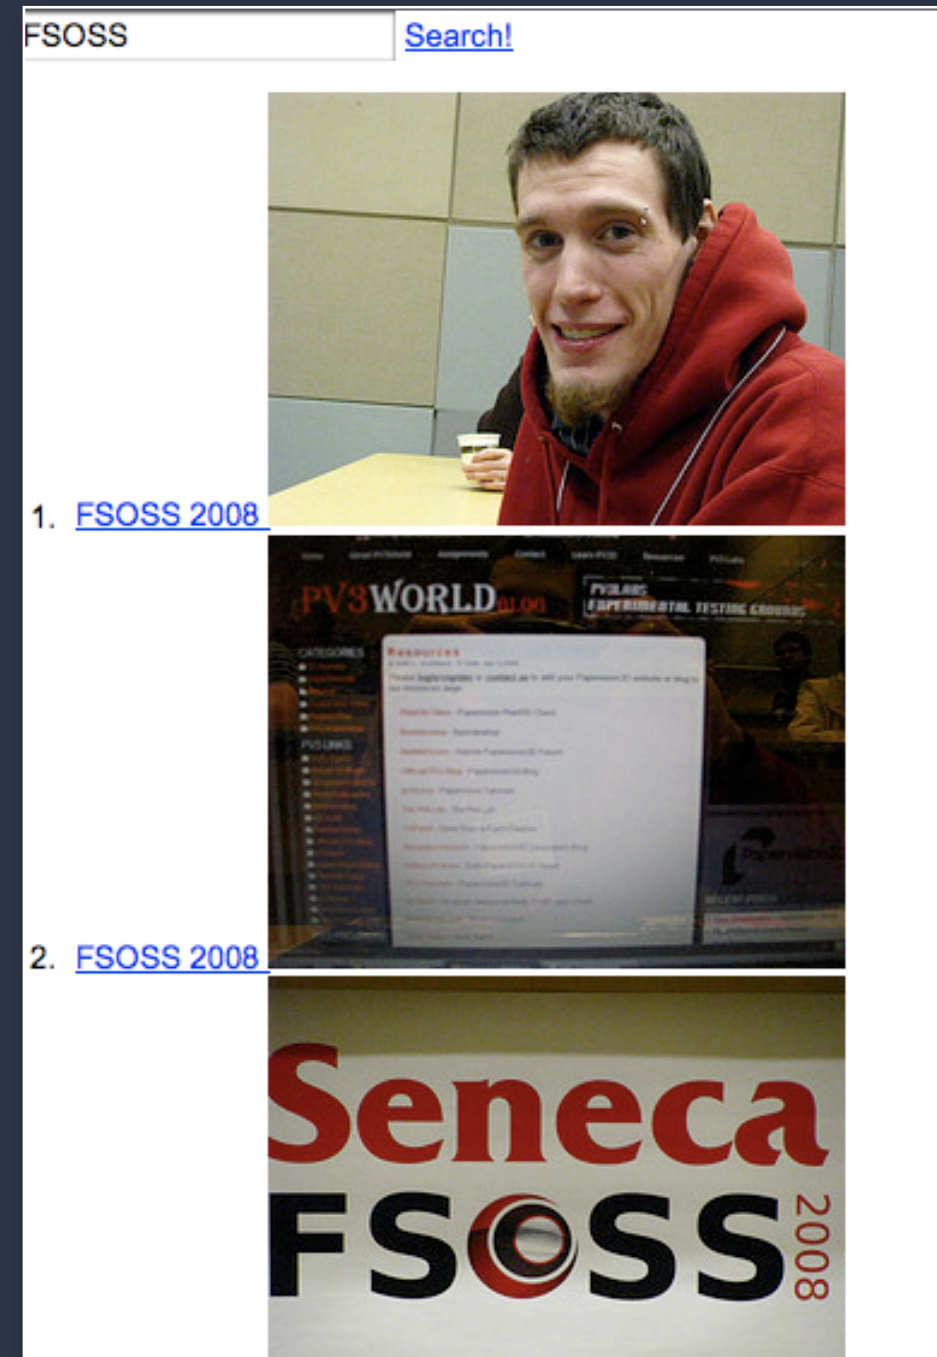

Rapid CSS using FSS

- Modular, extensible class-name CSS system
- Easy to read class names
- Plays nice with other CSS systems (jQuery themes, other frameworks, etc)
- Modularity means it's meant for you to hack
- Lots of support, fully cross browser

FSS Applied

Reset:

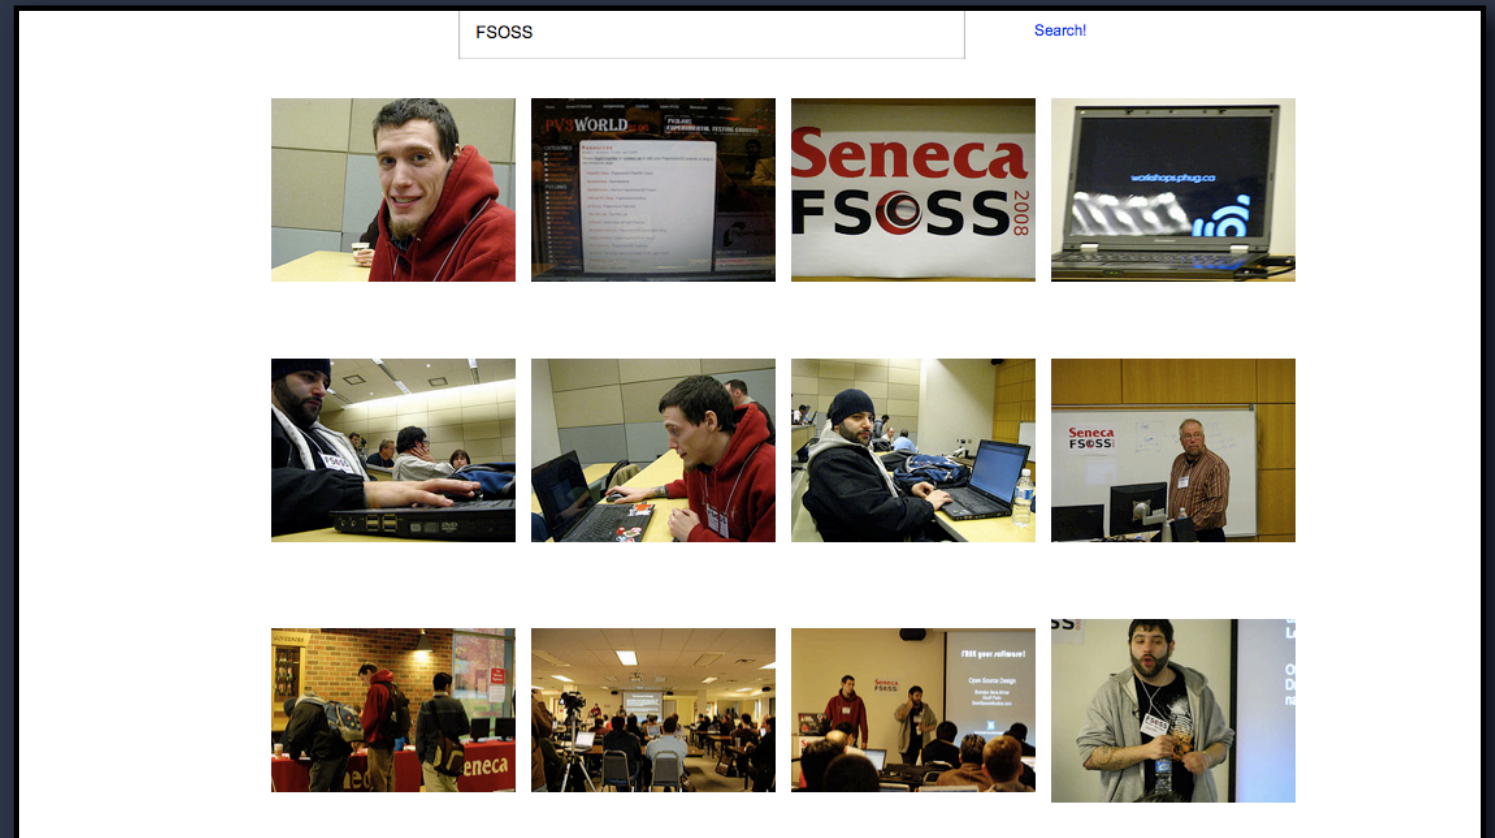

normalize the little things
for a consistent starting
point

FSS Applied

Layout:

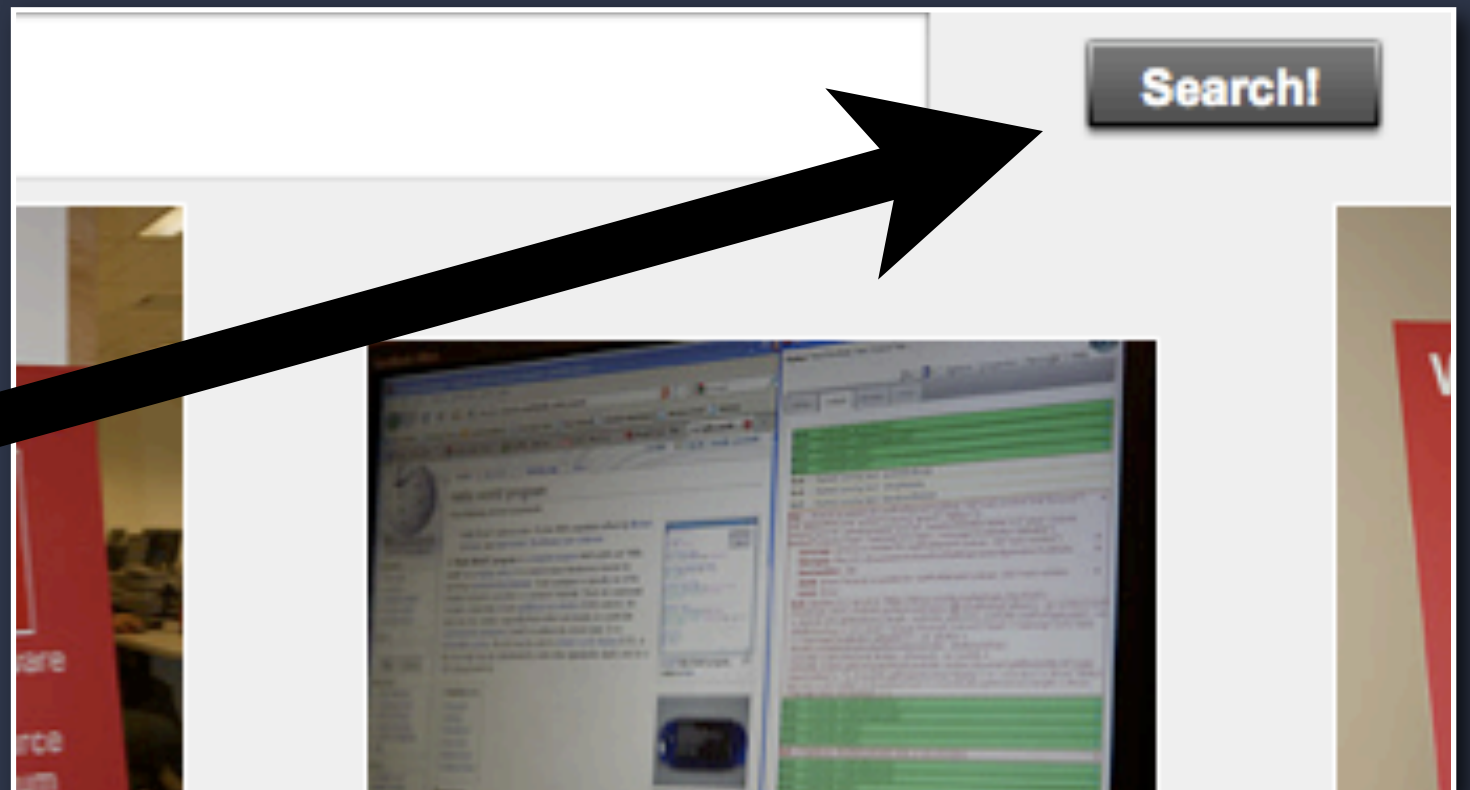

placement & containers

FSS Applied

Themes:

style, colors and
graphics

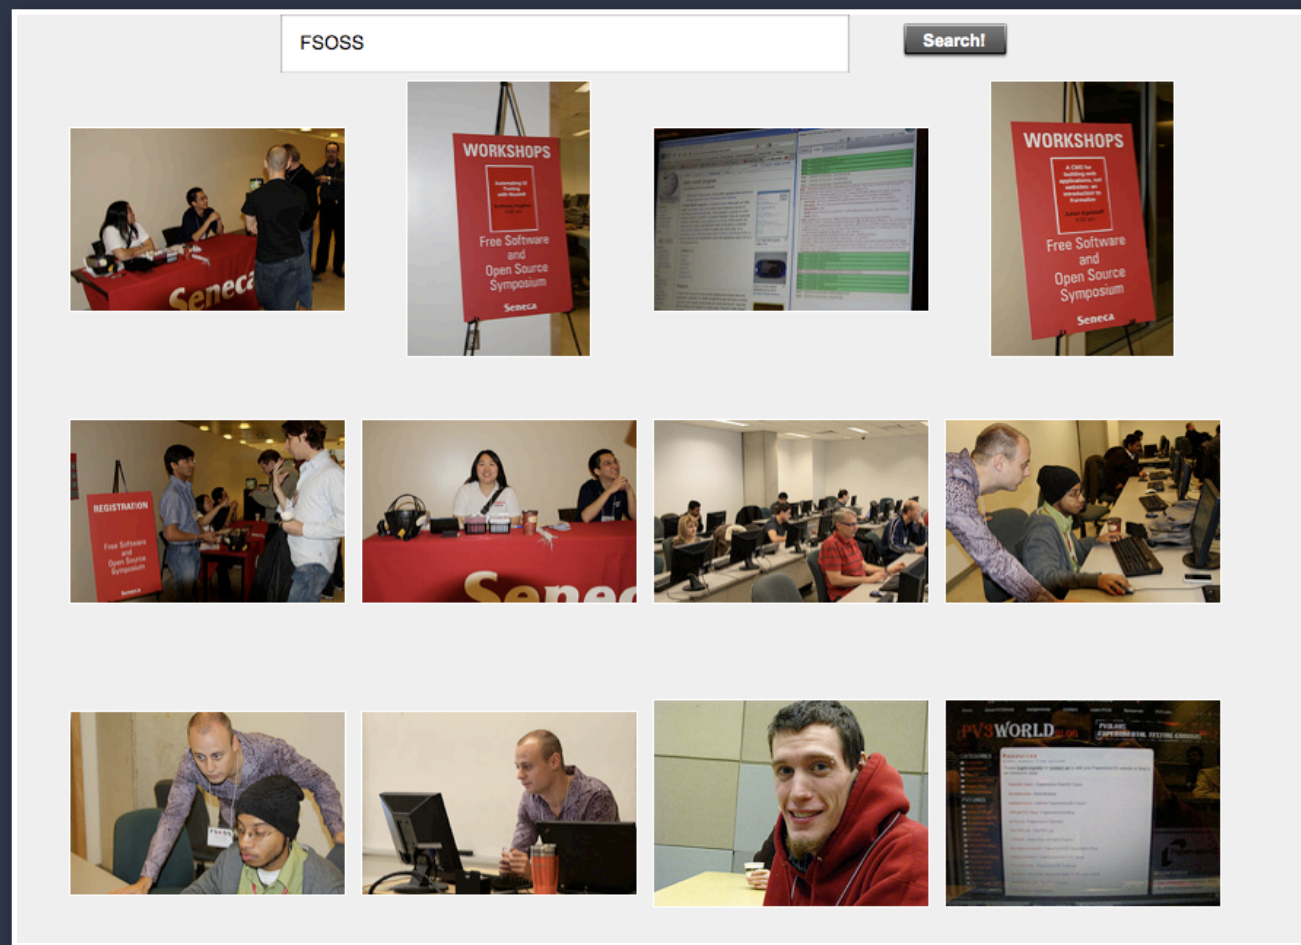

Mobile FSS

- Highly focused on target platforms
- Follows basic touchscreen UI guidelines from Apple and Android dev centres
- Repurposes FSS class names, enabling multiplatform content

Mobile FSS Applied

.fl-theme-coal

.fl-theme-iphone

=

Make it your own

.fl-theme-myTheme

Presentation Summary

- Loose coupling (DOM Agnosticism)
 - No baked dependence on markup
- Template Driven
 - You own the markup
- Rapid CSS
 - Get up and running fast, easily customized
